

IoT Adoption in Indian Agriculture

A 2020 Landscape

April 2021

Foreword

At 16% of national GDP, USD 421 bn GVA, 44% of nation's workforce employed, 9th position in agricultural exports to the world, and with record absolute production of food grains and horticultural crops (at nearly 300 MTs of each), Indian agriculture has yielded historically high outputs in 2019, despite softening of overall economic growth.

Yet, the biggest employer, of all sectors, is struggling with historically low resources in terms of land, labor, liquidity, and digitalization. Less than 1% of the total farmlands use a tractor, since 87% of the farms are <3 acres in size rendering mechanization unviable. Result – one of the lowest farmer incomes globally, at USD 1,700 per farmer.

NASSCOM and Cisco have collaborated on a study of the Agri value-chain to discover the extent of technology adoption in the sector, primarily the use of IoT-enabled solutions. The study, titled “IoT Adoption in Indian Agriculture: A 2020 Landscape,” highlights the major gaps and opportunities with IoT-led digitization of Indian agriculture.

Debjani Ghosh
President, NASSCOM

Globally, high-performing agricultural practices have demonstrated significant positive impact of employing basic farm mechanization, such as tractors, weather SMS alerts, drip irrigation, etc., on yield and crop-mix optimization. IoT-enabled deployments, with even basic sensor technology for real-time alerts, can be game-changing.

This report aims to unearth the transformational potential of IoT solutions, the deep lack of which, is hampering the path to sustainable productivity and profitability in the agriculture sector. The study unveils a first-of-its-kind IoT Adoption Index in Agriculture for India, from farm to market.

Sameer Garde
President, Cisco India and SAARC

A snapshot of emerging IoT adoption practices by enterprises, AgriTech startups, and innovating farmers aims to further highlight the criticality of “connected agriculture” and our recommendations to achieve it.

We hope you find this report a useful read. Your feedback is solicited and welcome!

Scope of The Study

IoT Adoption in Indian Agriculture is an initial study of the sector to explore current state of economic output, limiting challenges, and potential role of IoT-enabled solutions to bring sustainable growth to the sector

—
This study aims to combine learnings from primary surveys of a wide cross-section of stakeholders in the agriculture value chain with global best practices to formulate recommendations for enhancing the productivity and profitability of this critical sector.

Specific areas of analysis

- Awareness and usage-based assessment of IoT adoption across the agricultural value chain
- Future roadmap of IoT implementation – areas with low adoption and high potential benefits
- Snapshot of emerging IoT-in-Agri solutions by enterprises and startups, and recommendations

1

Current State of Indian Agriculture

- Economic impact of Indian agriculture
- Emerging agrarian stress points
- Farmer incomes and regional disparities
- PM 7-point agenda on doubling farmer income
- Global agricultural technology transformation cases
- Global IoT in agriculture market trends and enabling developments

2

Twin Challenges of The Non-Digitized Indian Agri Sector

- The twin challenges of low productivity and declining profitability across the Agri value chain
- Nascent but emerging IoT adoption in Indian agriculture
- Four core areas of integrated farm-to-market digitization
- Example of an integrated farm-to-market Agri Digital Architecture

3

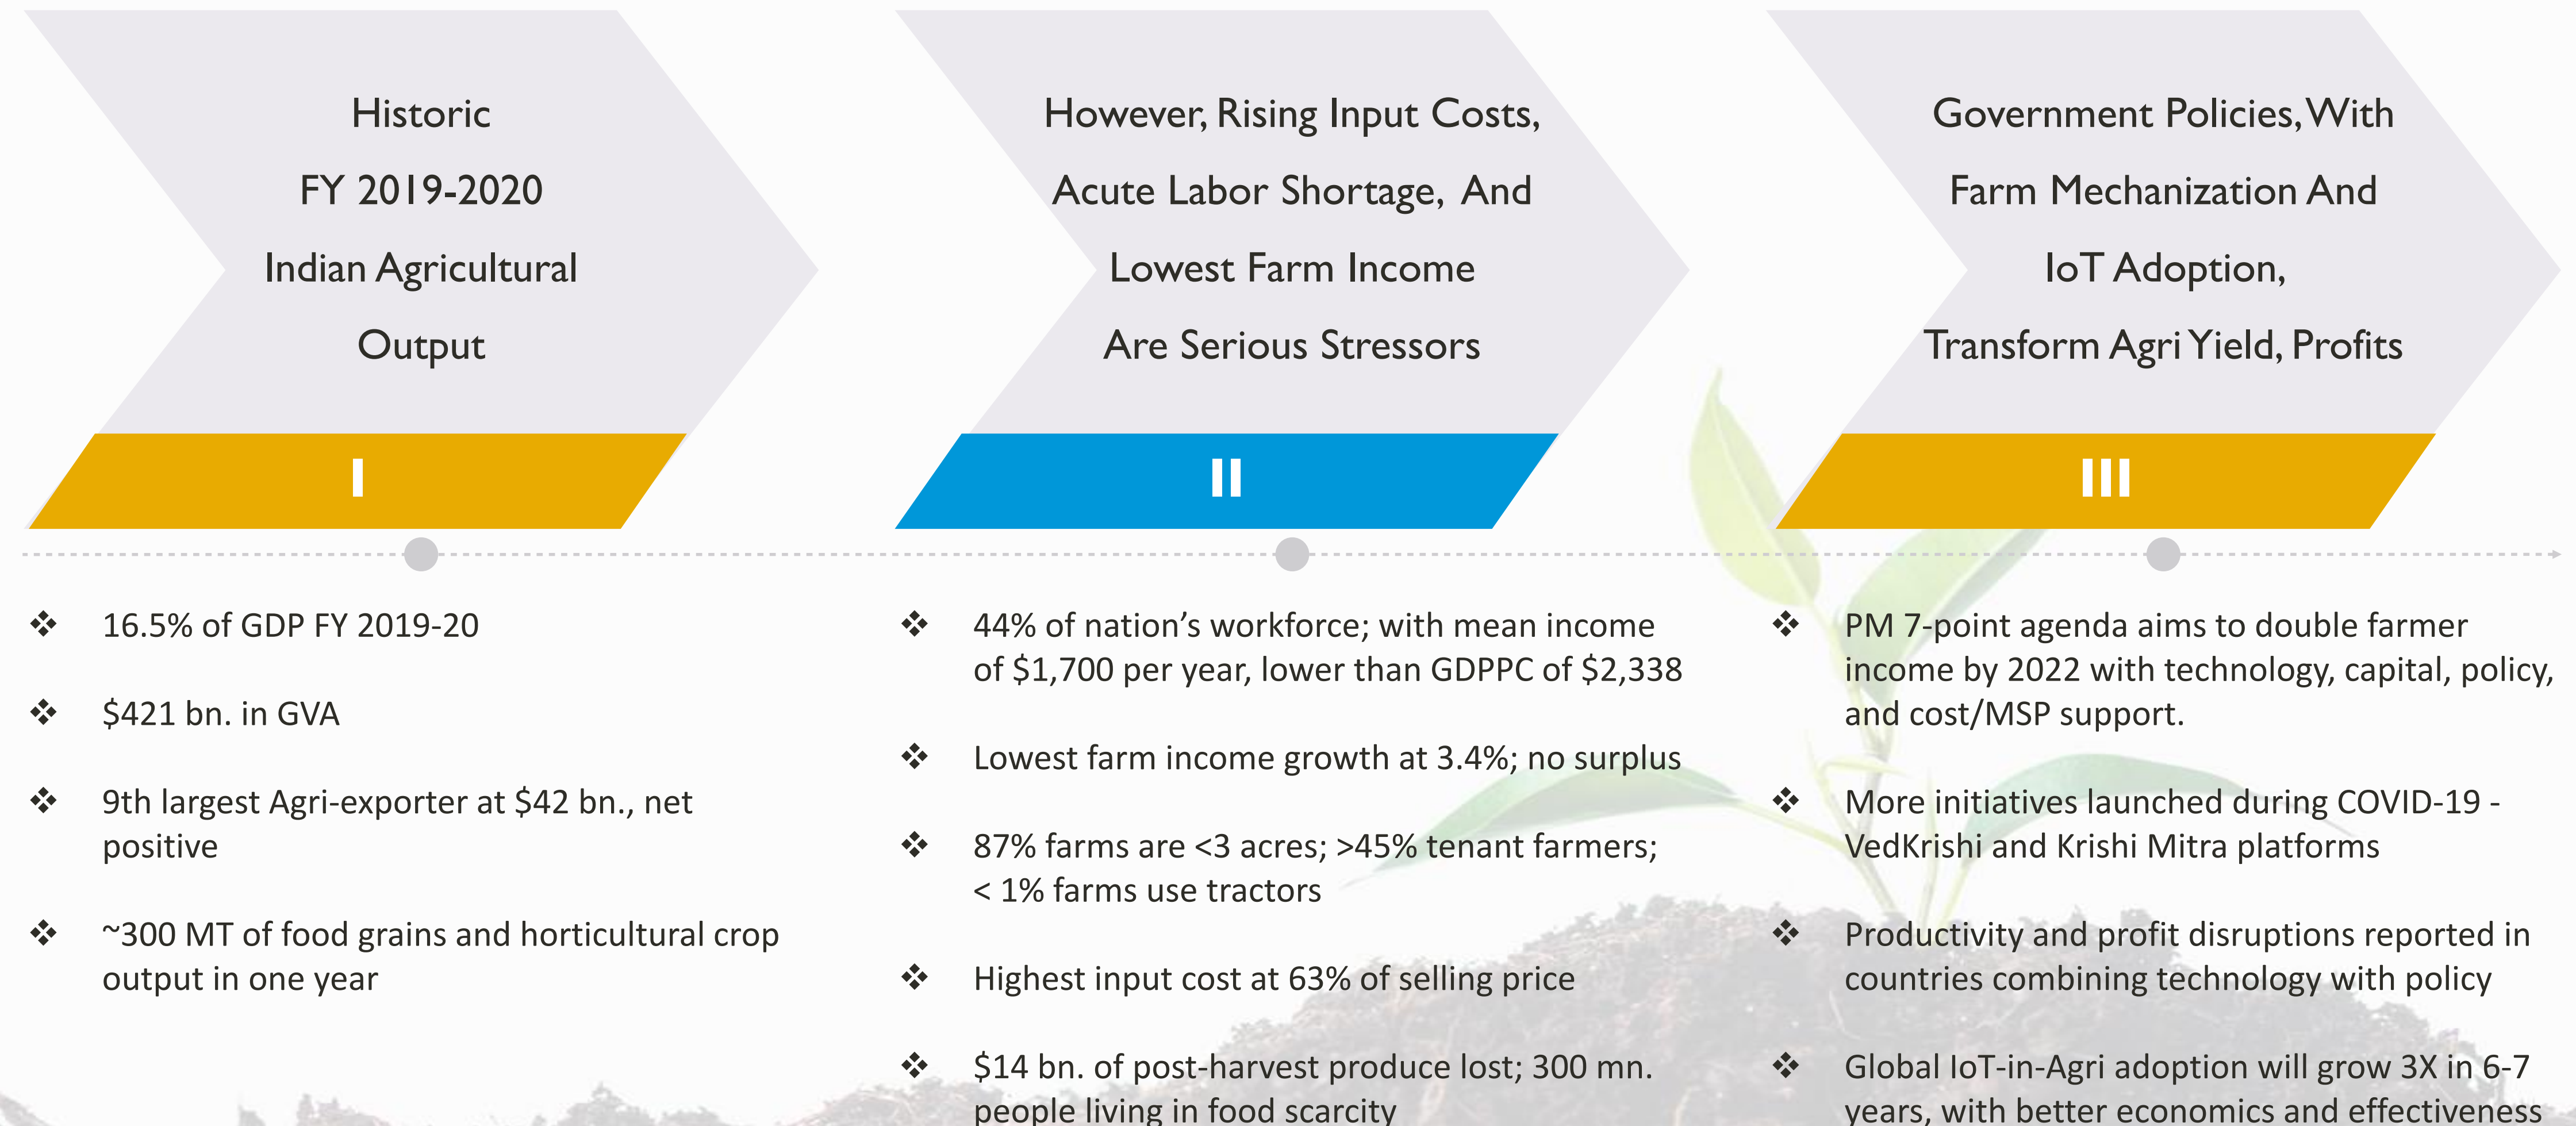

IoT – Transforming Agriculture and Ecosystems

- IoT Adoption Index across the Agri value chain based on four parameters of awareness, usage, benefits and time-to-scale
- Adoption gaps and challenges
- Enterprise IoT solutions and value chain adoption cases
- State government AgriTech initiatives
- AgriTech startups and key focus areas
- CSR-led AgriTech investments
- Sector transforming recommendations

Report Contents

Executive Summary	5		
Section I: Current State of Indian Agriculture			
Section Summary	8		
Economic Contribution of Indian Agriculture, FY 2019-20	9		
Emerging Stress Points in Indian Agriculture	10		
Regional Farmer Income and Cost Trends	11		
PM 7-Point Agricultural Strategy	12		
Global Agri Transformation Via Farming Technology	13		
Global Adoption Trends in IoT in Agriculture	14		
Section II: Twin Challenges of The Non-Digitized Sector			
Section Summary	16		
Twin Challenges with Indian Agriculture	17		
		Indian IoT in Agriculture Trends	18
		Four Areas of IoT Intervention in Indian Agriculture	19
		Cisco Agri-Digital Architecture	20
		Section III: IoT – Transforming Agriculture and Ecosystems	
		Section Summary	23
		IoT Adoption Index Survey Respondents Summary	24
		IoT Adoption Index	25
		IoT Adoption Case Studies	32
		IoT Adoption Ecosystem	42
		Section IV: Recommendations and Action Steps	
		Recommendations to Drive IoT Adoption in India	52

Executive Summary (1/2)

Standard usages in the study:

1. \$ refers to US Dollars or USD. For forex conversion, 1 USD = INR 70

2. Mn. is million and bn. is billion

3. Agri is used a short form of agriculture in certain references

4. IoT refers to Internet of Things in its most standard definition

5. AgriTech refers to a specific set of companies – enterprises and startups – that are Tech-first in their approach to building/deploying solutions for the sector

Executive Summary (1/2)

IoT Solutions Can Solve
The Twin Challenges
Of Productivity And
Profitability In Indian Agri

IV

- ❖ Twin challenges of Indian agriculture are low productivity and untenable returns
- ❖ IoT-based solutions solve for the core problem of timely, actionable, real-time data access
- ❖ In India, IoT in farming tools and techniques is nascent – some states are setting up programs
- ❖ IoT adoption can be progressively ramped up – from point sensors to “connected agriculture”

NASSCOM'S IoT Adoption Index
Reveals Massive Gap
In Awareness Vs. Use
Across the Agri Value Chain

V

- ❖ 180+ enterprises, across pre- and post-harvest, surveyed, 40 AgriTech startups surveyed
- ❖ IoT Adoption Index is a weighted score of IoT awareness, implementation, RoI, and scale-up efforts across the value chain
- ❖ Between 27%-37%, the adoption is very low, with a 3X drop from knowing IoT to using it
- ❖ Biggest gaps in usage of any advanced IoT solutions beyond point sensors
- ❖ Minimum 3-5 years to mainstream adoption if solutions are found to lower TCO, improve usage consistency, and demonstrate RoI

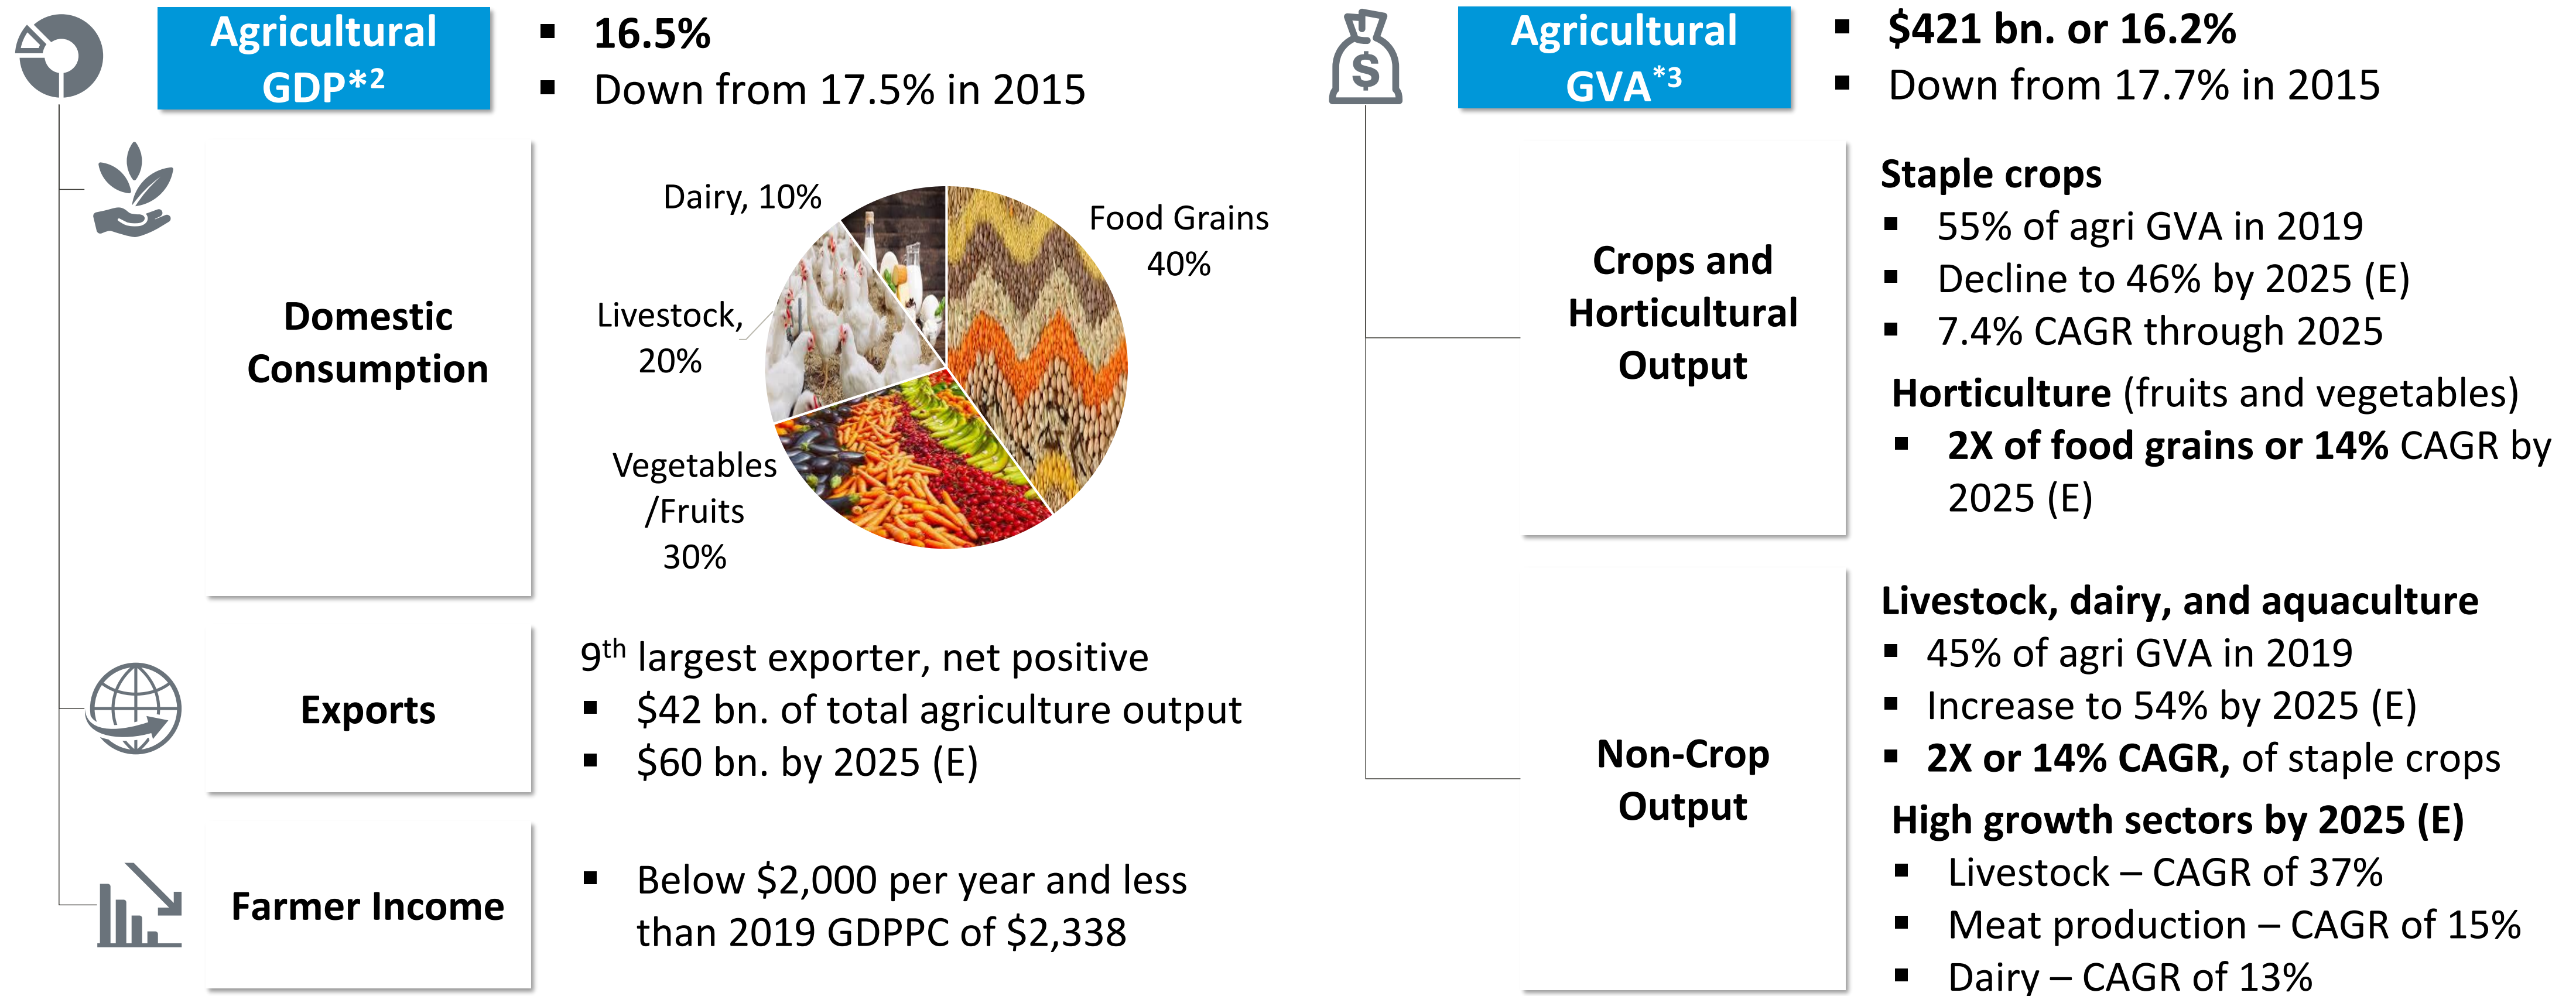

Tech-Driven Self-Sustaining
Agri Transformation
Will Need Coordinated
Ecosystem Action

VI

- ❖ More AgriTech innovation CoEs on lines of STPI models; advanced R&D on high-yield inputs
- ❖ Cluster-led development; focus on lowest cost tech and highest RoI with capital infusion
- ❖ Dedicated farmer training; more formal Agri education avenues
- ❖ IoT integration into existing farm tools, greater post-harvest and value-chain digitization
- ❖ Market-linked real-time visibility of cost of inputs and product pricing

Despite a services shift, India continues to be a dominant agrarian economy with a 16% Agri-to-GDP ratio, relative to global 6.4%

Economic Contribution of Indian Agriculture*¹, FY2019-20

*1 - Indian Agriculture comprises crop output – food grains and horticulture (fruits and vegetables) – and non-crop output – poultry and livestock, dairy farming, fisheries and aquaculture

*2 - GDP is the monetary value of all goods and services produced within a country in a defined period. Agri-to-GDP ratio is in real GDP accounting for inflation

*3 - GVA is Gross Value Added, measured in gross value added by all products and services, not net of cost of value creation, in a defined period

Sources: Economic Survey of India 2019, Livemint, Statistics Times, The Sunday Guardian, IBEF, and Business Standard

The sector has yielded higher outputs with lesser, costlier inputs, and yet, more Indians face the paradox of “scarcity in abundance”

During 2010-2019, Agri inputs have either flattened or gotten costlier and farmer investible surplus has eroded even while Agri output and consumption have consistently risen. Will this sustain when India becomes a 1.7 bn. people nation in 2050?

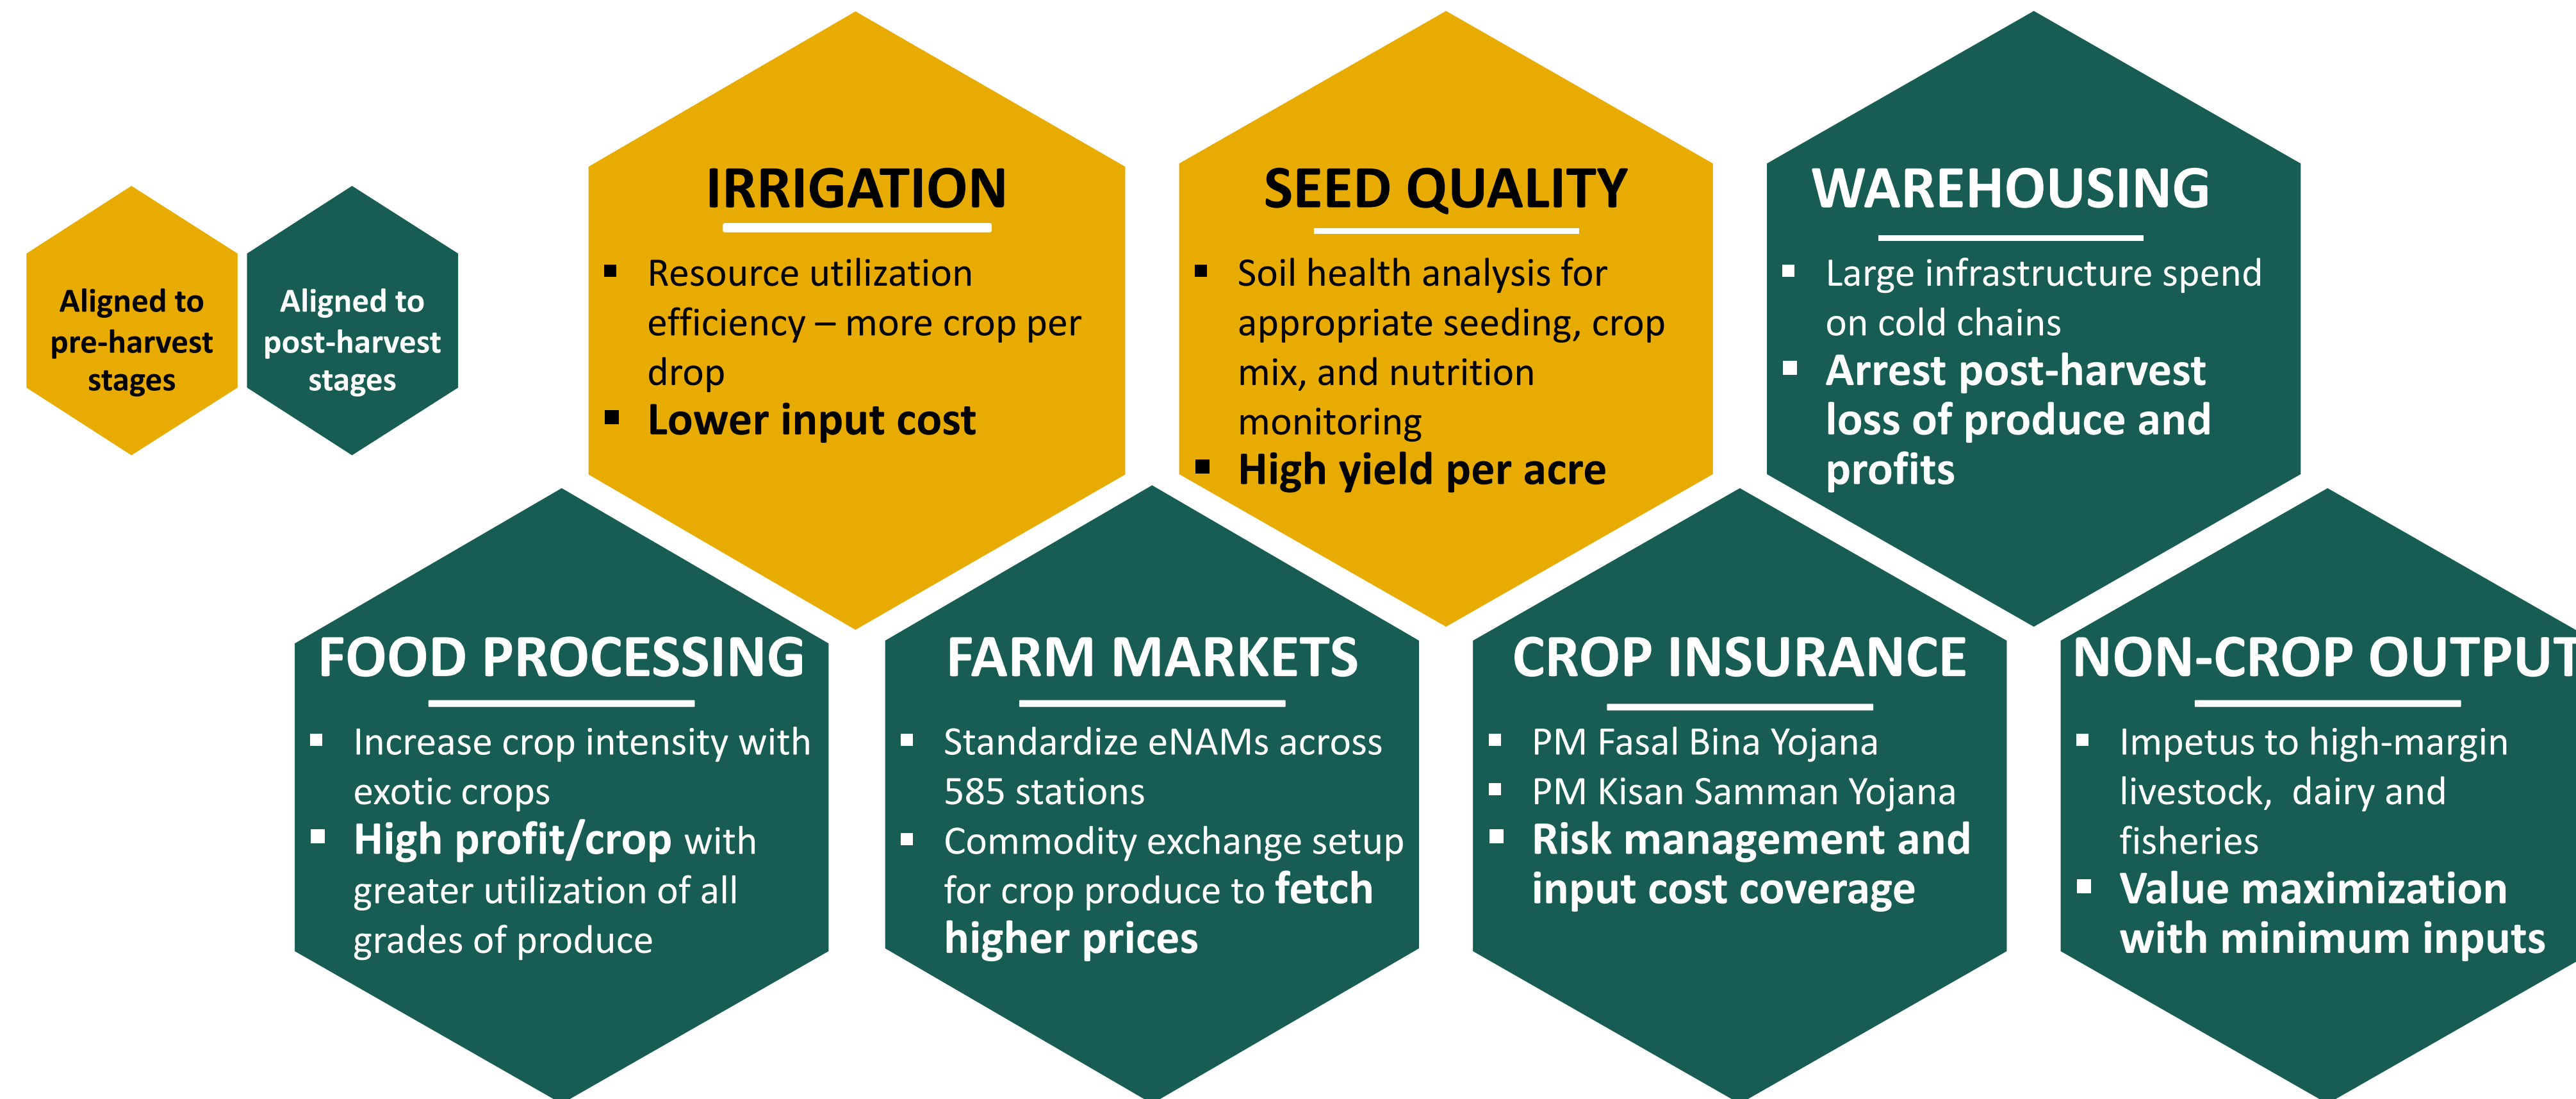

Regional disparities in land size, input costs and farmer incomes make a “one-size-fits-all” solution implementation ineffective

Regions that have focused on maintaining a minimum viable farm size, sustainable crop mix to suit local demand and farm productivity, and use of tractors and irrigation techniques, have yielded higher outputs and superior margins.

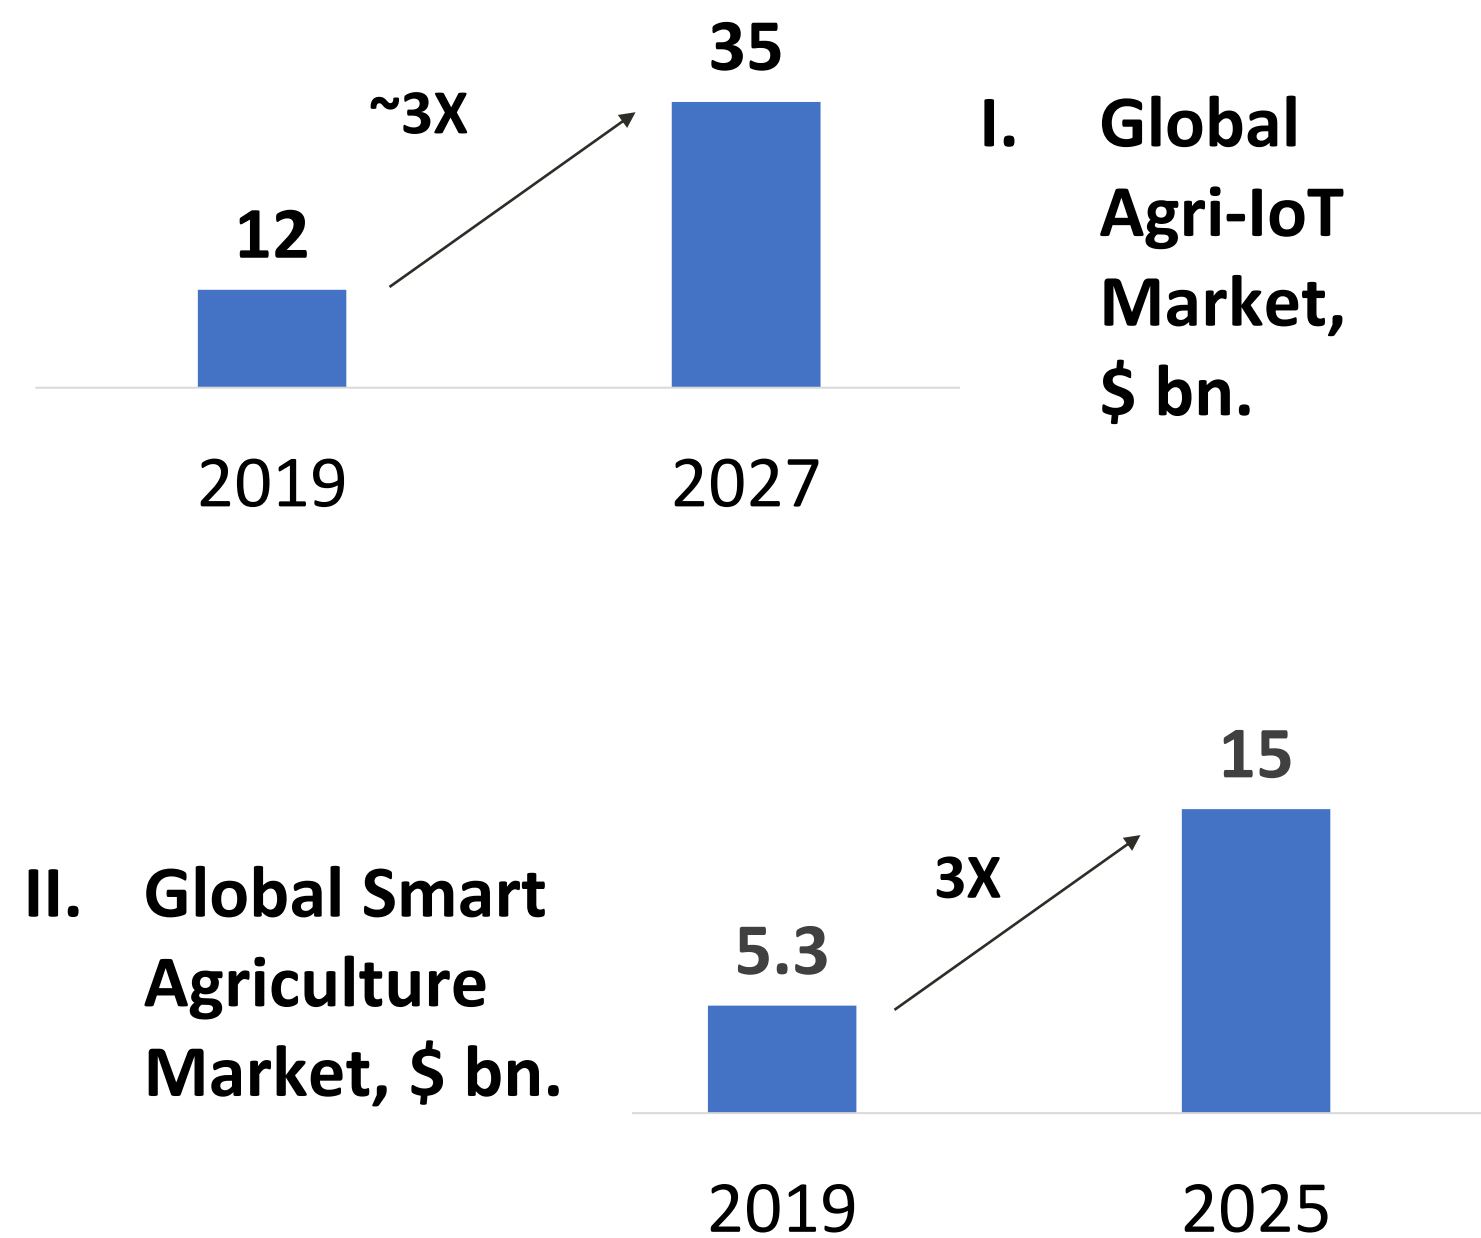

PM's 7-point agenda is an in-progress, coordinated set of strategies to minimize regional disparities and double farmer income by 2022

Raising crop production, reducing cultivation costs, arresting post-production losses, and reforming farm-to-market ecosystem and access with policies and technology are the primary focus areas to double farmer incomes.

3X growth of IoT adoption in agriculture, globally, is indicative of the potential of this technology to transform the Agri value chain

Trends in Global Agriculture IoT Adoption

III. 75 Million IoT device installations in the agricultural sector globally, by 2020

Maturing IoT technologies
+
global standards
+
investor interest
+
enabling tech (AI, Edge)
=
IoT-enabled Agri value chain transformation

Improving Economics of IoT in Agriculture

70% fall in sensor cost, from \$1.3 in 2004 to \$0.4 in 2019

Tech standardization – IoT, M2M, and IOTA

\$20 bn. AgriTech funding – 1.3% up in pre-harvest farm robotics & software, sensors, IoT

AgriTech startups – 3,000+ global | 450+ Indian

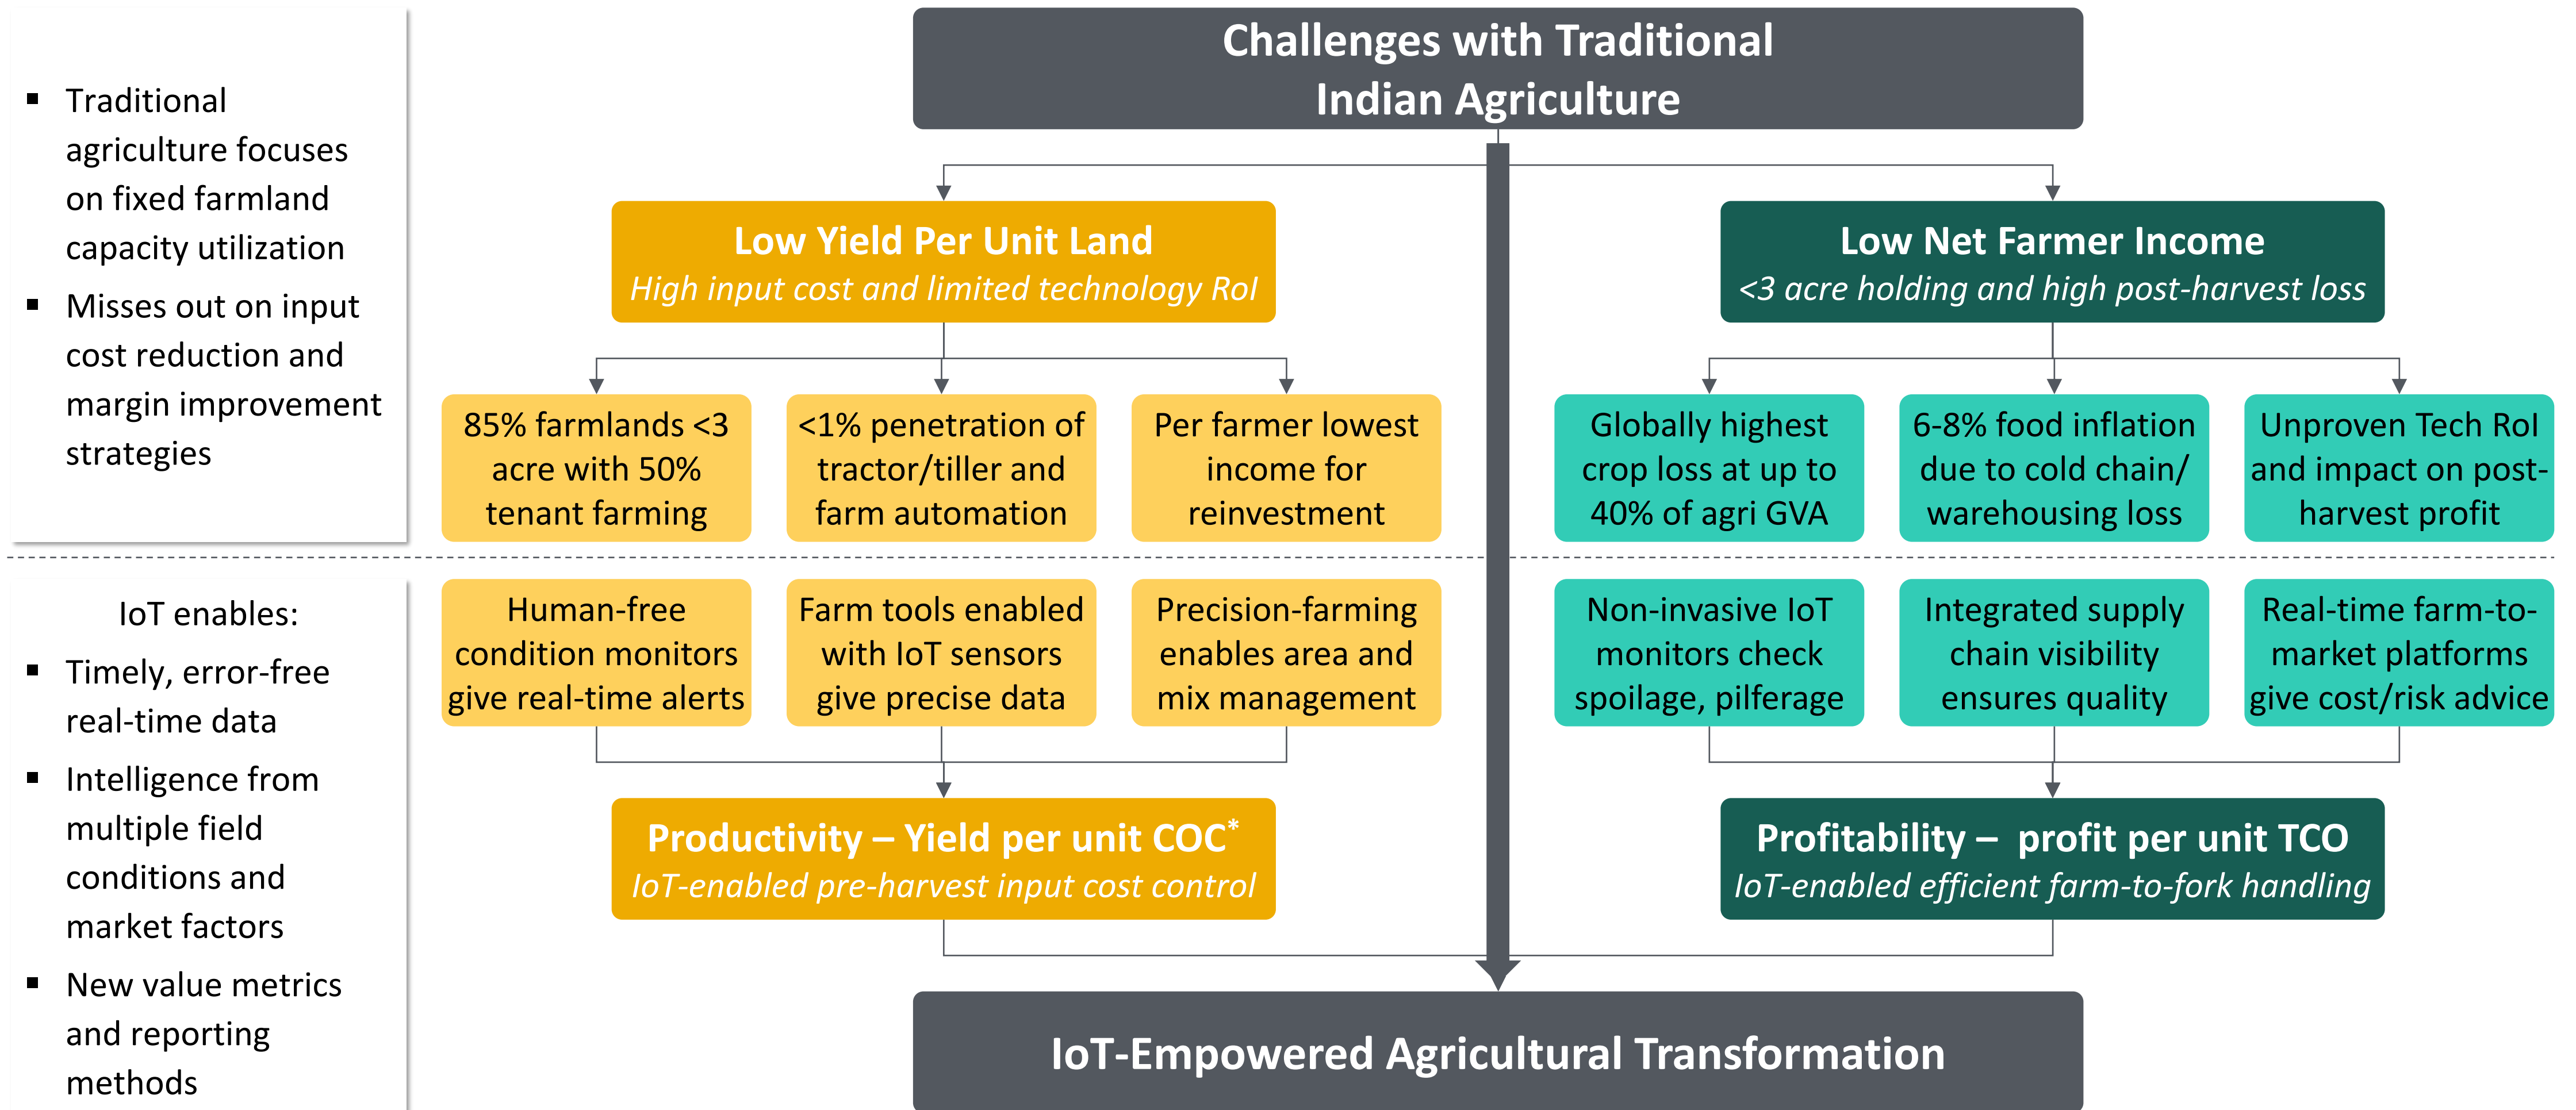

Growing Effectiveness of IoT Solutions

More sensitive and accurate tracking

Tech convergence with Edge and data analytics

Diverse solutions – point-to-platform – and convergence

The twin challenges of productivity and profitability in Indian agriculture have sustainable solutions in IoT-enabled approaches

Current state of IoT deployment in Indian Agri is nascent and disparate, both in available solutions, and in the initiatives taken

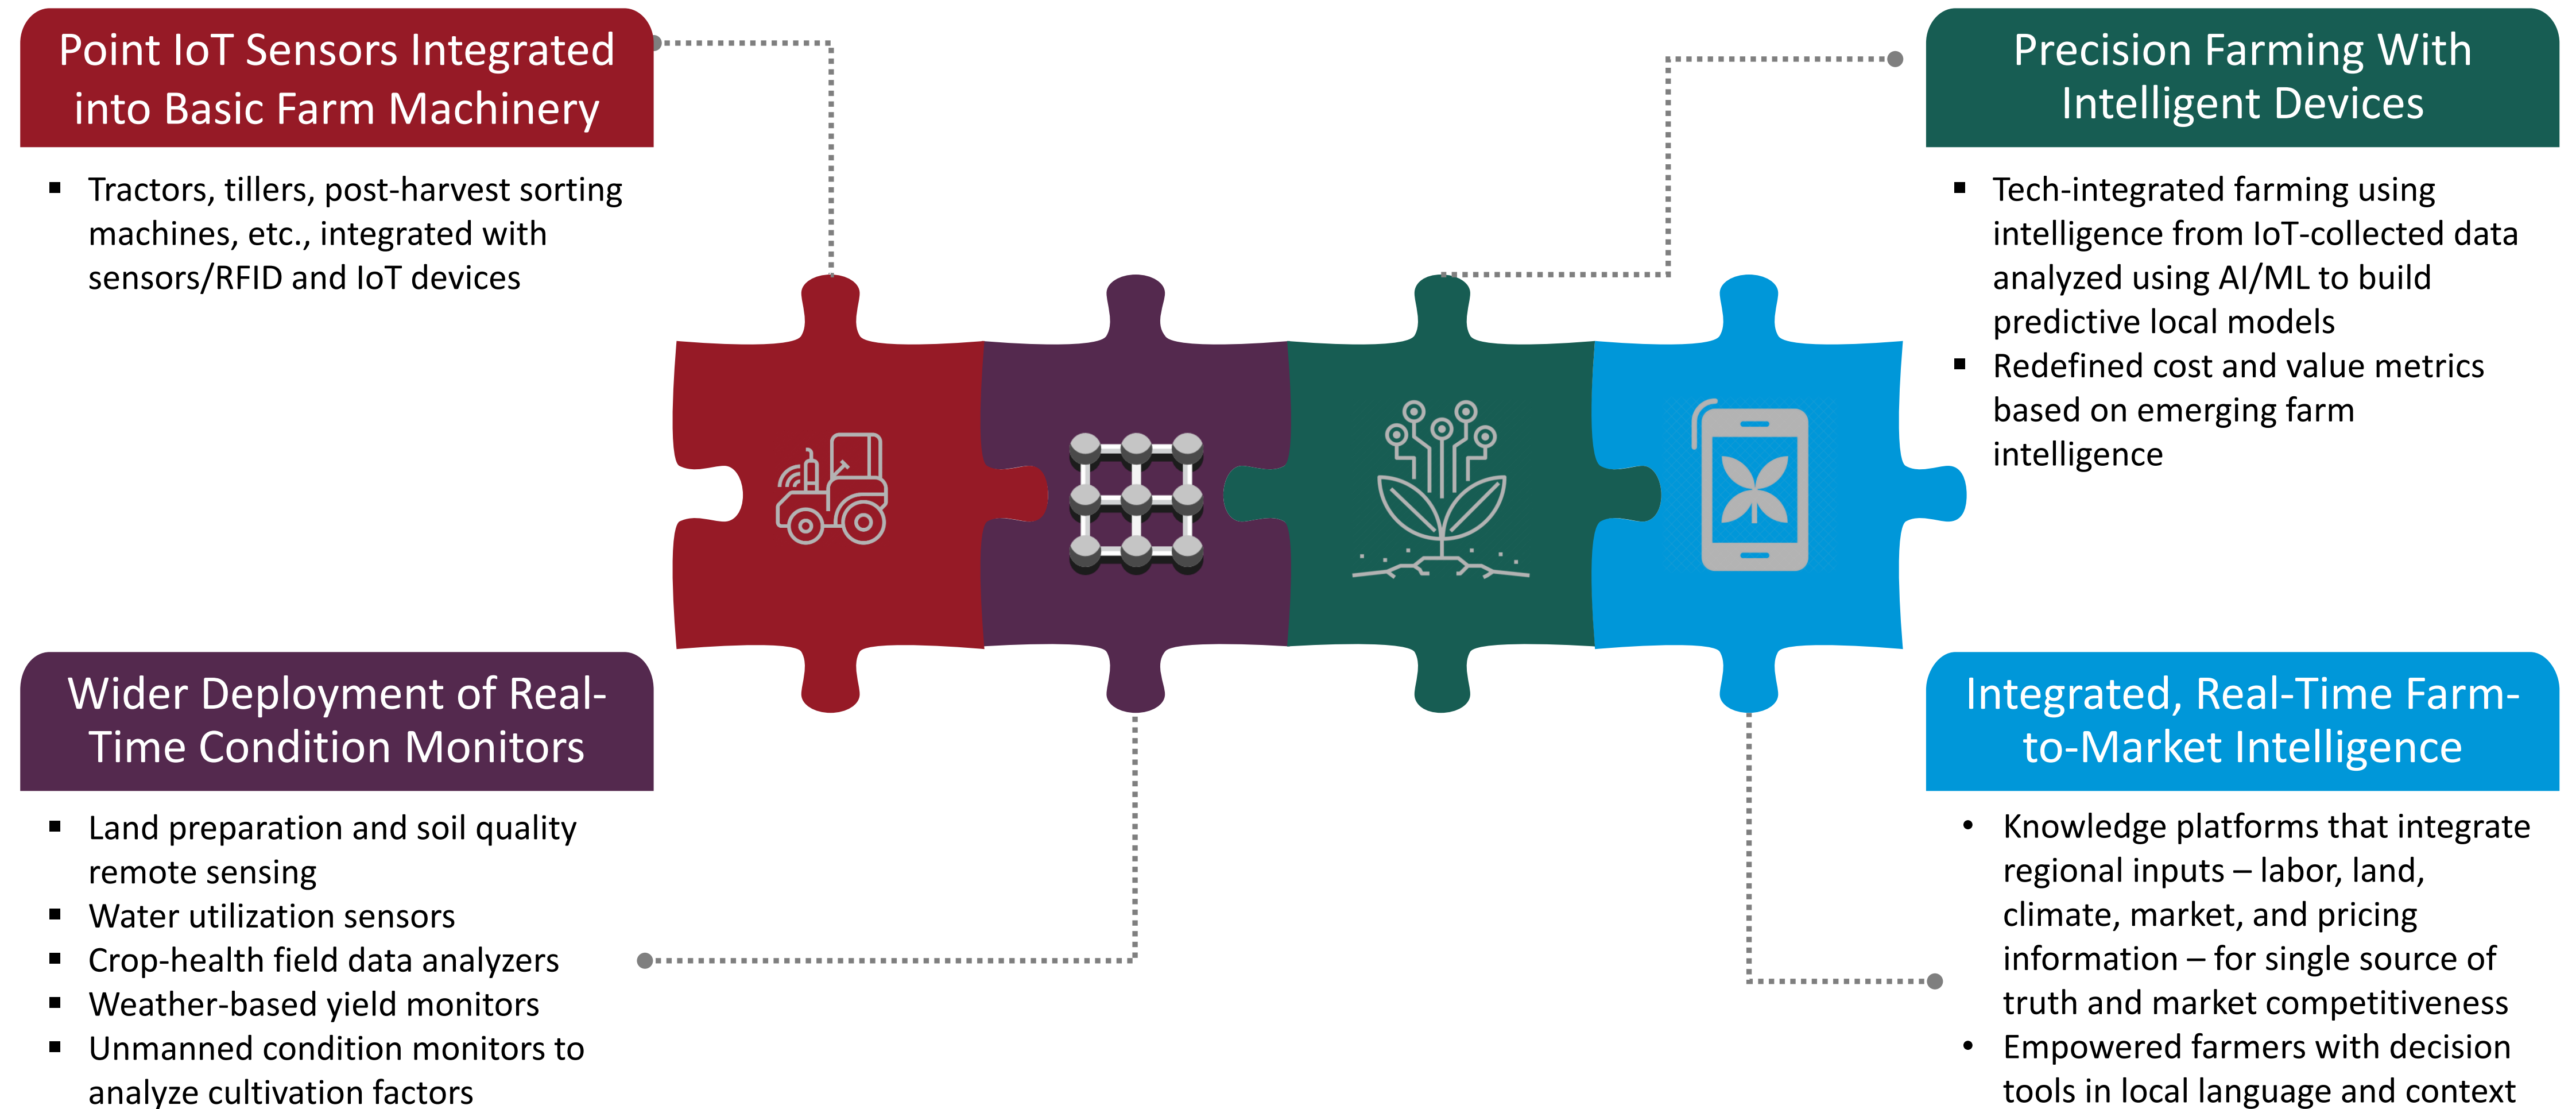

Cultivation or pre-harvest stages have lowest IoT adoption, despite most critical need to precisely optimize soil, crop, nutrient, and final produce health, due to unproven viability with small farms, tenant farming, and high input costs.

	Pre-Harvest	Post-Harvest
Current state of IoT adoption in agriculture	<ul style="list-style-type: none"> 90% AgriTech startups are focusing on pre-harvest solutions, but scale-up will take 5+ years Only 2% farmers use mobile Apps for farm-related activities and real-time alerts 	<ul style="list-style-type: none"> 50% enterprise adopters at PoC or Proof of Trial Mainstream adoption to take 2-3 years or more Higher adoption in Agri-distribution and Agri-processing sectors
AgriTech focused government initiatives	<ul style="list-style-type: none"> Govt. of Maharashtra building AI/ML for crop yield modeling and crop surveillance Govt. of Tamil Nadu uses AI/ image analytics tool to alert on crop diseases in real-time, as well as, a comprehensive Agri-Tech portal for insights, policies, alerts, and real-time support 	<ul style="list-style-type: none"> Govt. of Maharashtra has plans for an exclusive dashboard with integrated DSS and a geo-portal for holistic agriculture management Govt. of Tamil Nadu has the Uzhavan App to track and alert at each value chain stage, and give a real-time market view on crop pricing

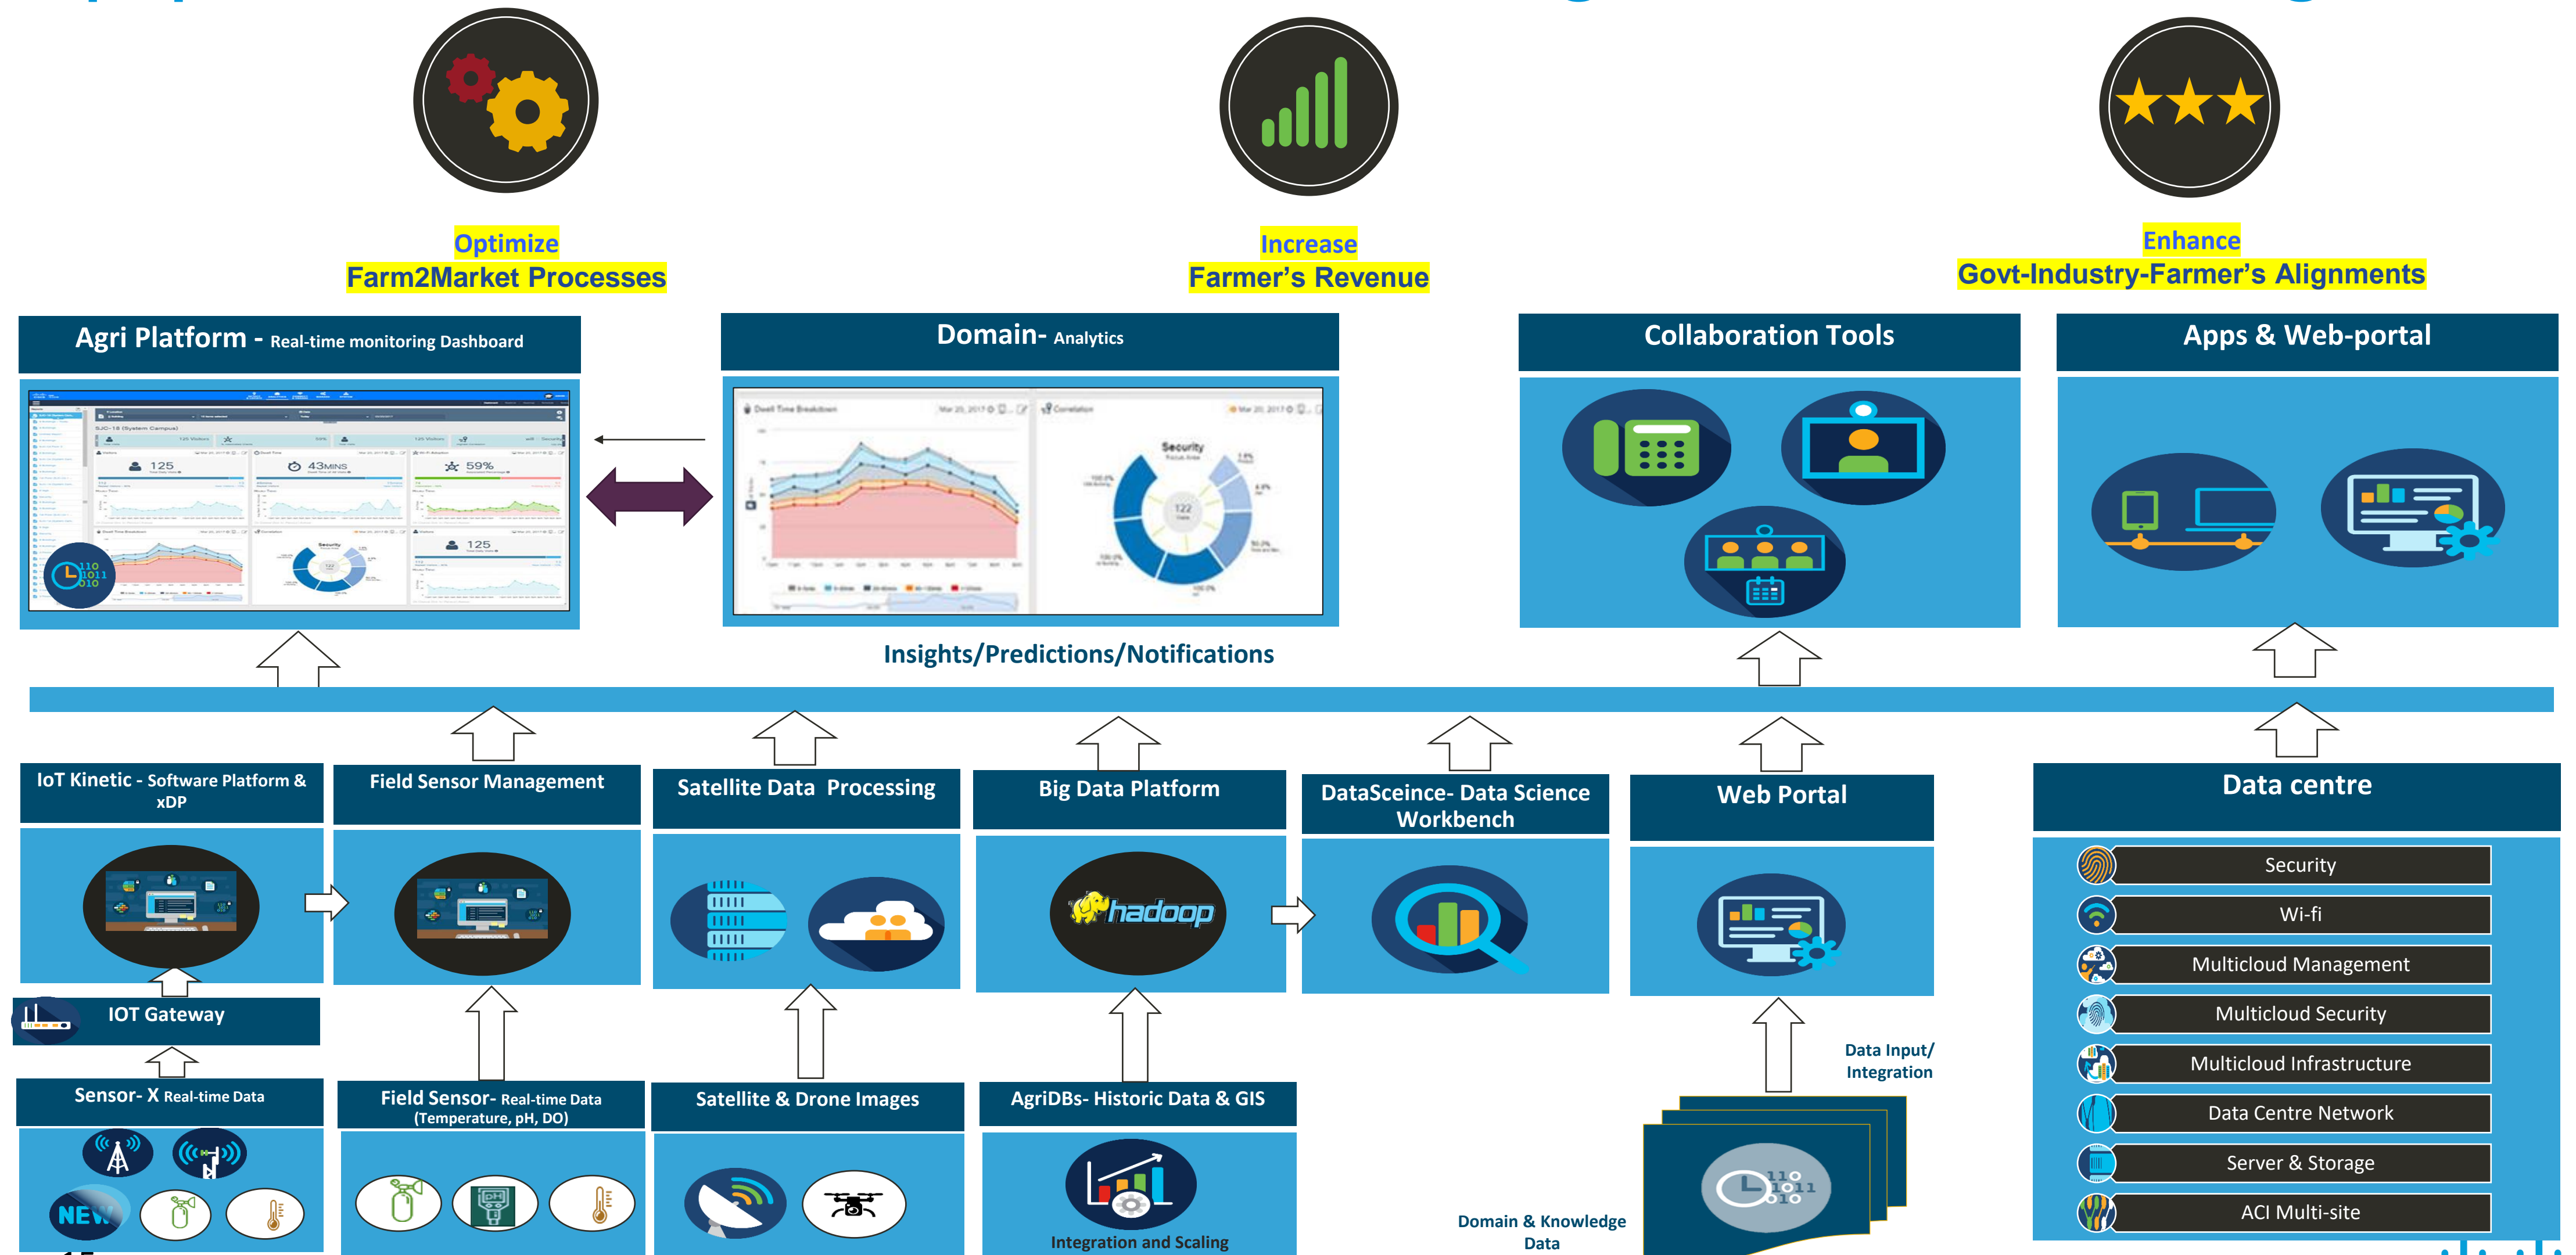

Early Steps, Need More

- \$910 mn. or 2% of \$50bn FDI in 2019-20 came into the Agri-processing sector
- \$245 mn. funding put into AgriTech startups in 2019, up 350% YoY
- 3-4 state governments have AgriTech policies and are planning investment frameworks

Progressive, step-by-step integration of point IoT solutions into connected farm-to-market solutions will build scale and value-add

Cisco's modular Agri-Digital Architecture enables all four pillars to equip farmers with contextualized farming and market intelligence

NASSCOM IoT Adoption Index survey covered 184 enterprises, government departments, and 40 startups across the value chain

Participants' Profile – Primary Research Group

CIO's & Tech Heads in Post Harvest Companies	Technology resources in value chain companies	System Integrators & Large IoT providers in Agri	Start-up CEO and Product Heads in Post Harvest Start-ups	Investors in AgriTech Start-ups (IoT & AI)
--	---	--	--	--

Government Departments

- NABARD
- ICAR
- NHB
- International Crop Research Institute
- Mahalanobis National Crop Forecast Centre
- Food Corporation of India
- Central Warehousing Corporation (CWC)
- State Warehousing Corporation (SWC)
- IFFCO Kisan Sanchar Limited
- National Oilseeds and Vegetable Oils Development Board (NOVOD)
- All India Agro Kendra

Surveyed and Interviewed Enterprise Segments

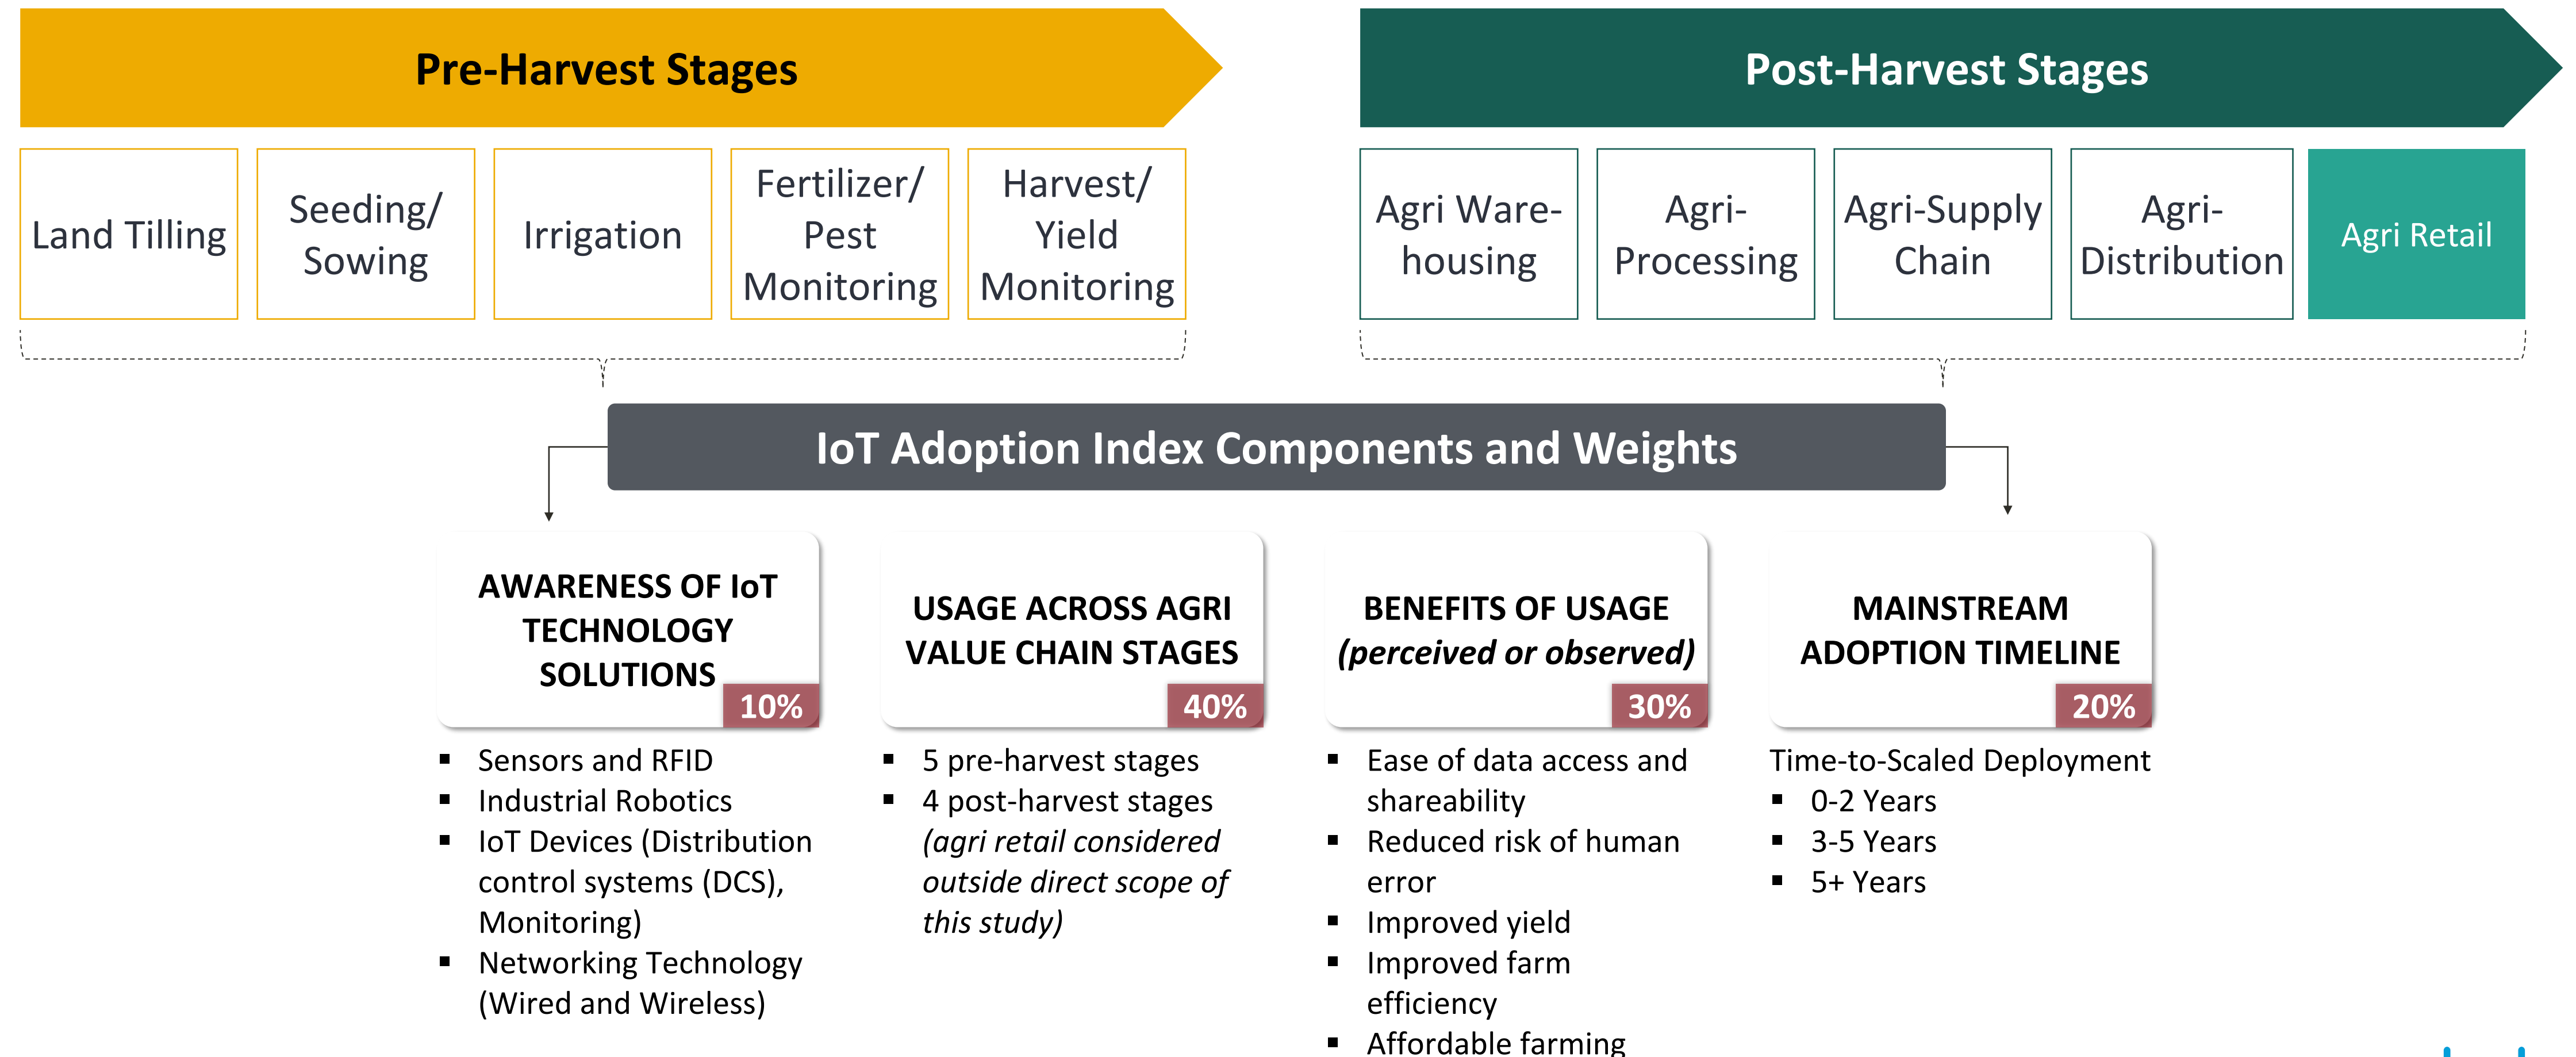

Seeds and Crop Science 18	Farm and Agro-Machinery 29	Fertilizers and Pesticides 5	Warehousing and Bulk Handling 12	Agri and Food Processing 75	Logistics and Trucking 21	Food Retail 13
------------------------------	-------------------------------	---------------------------------	-------------------------------------	--------------------------------	------------------------------	-------------------

Value Chain Distribution

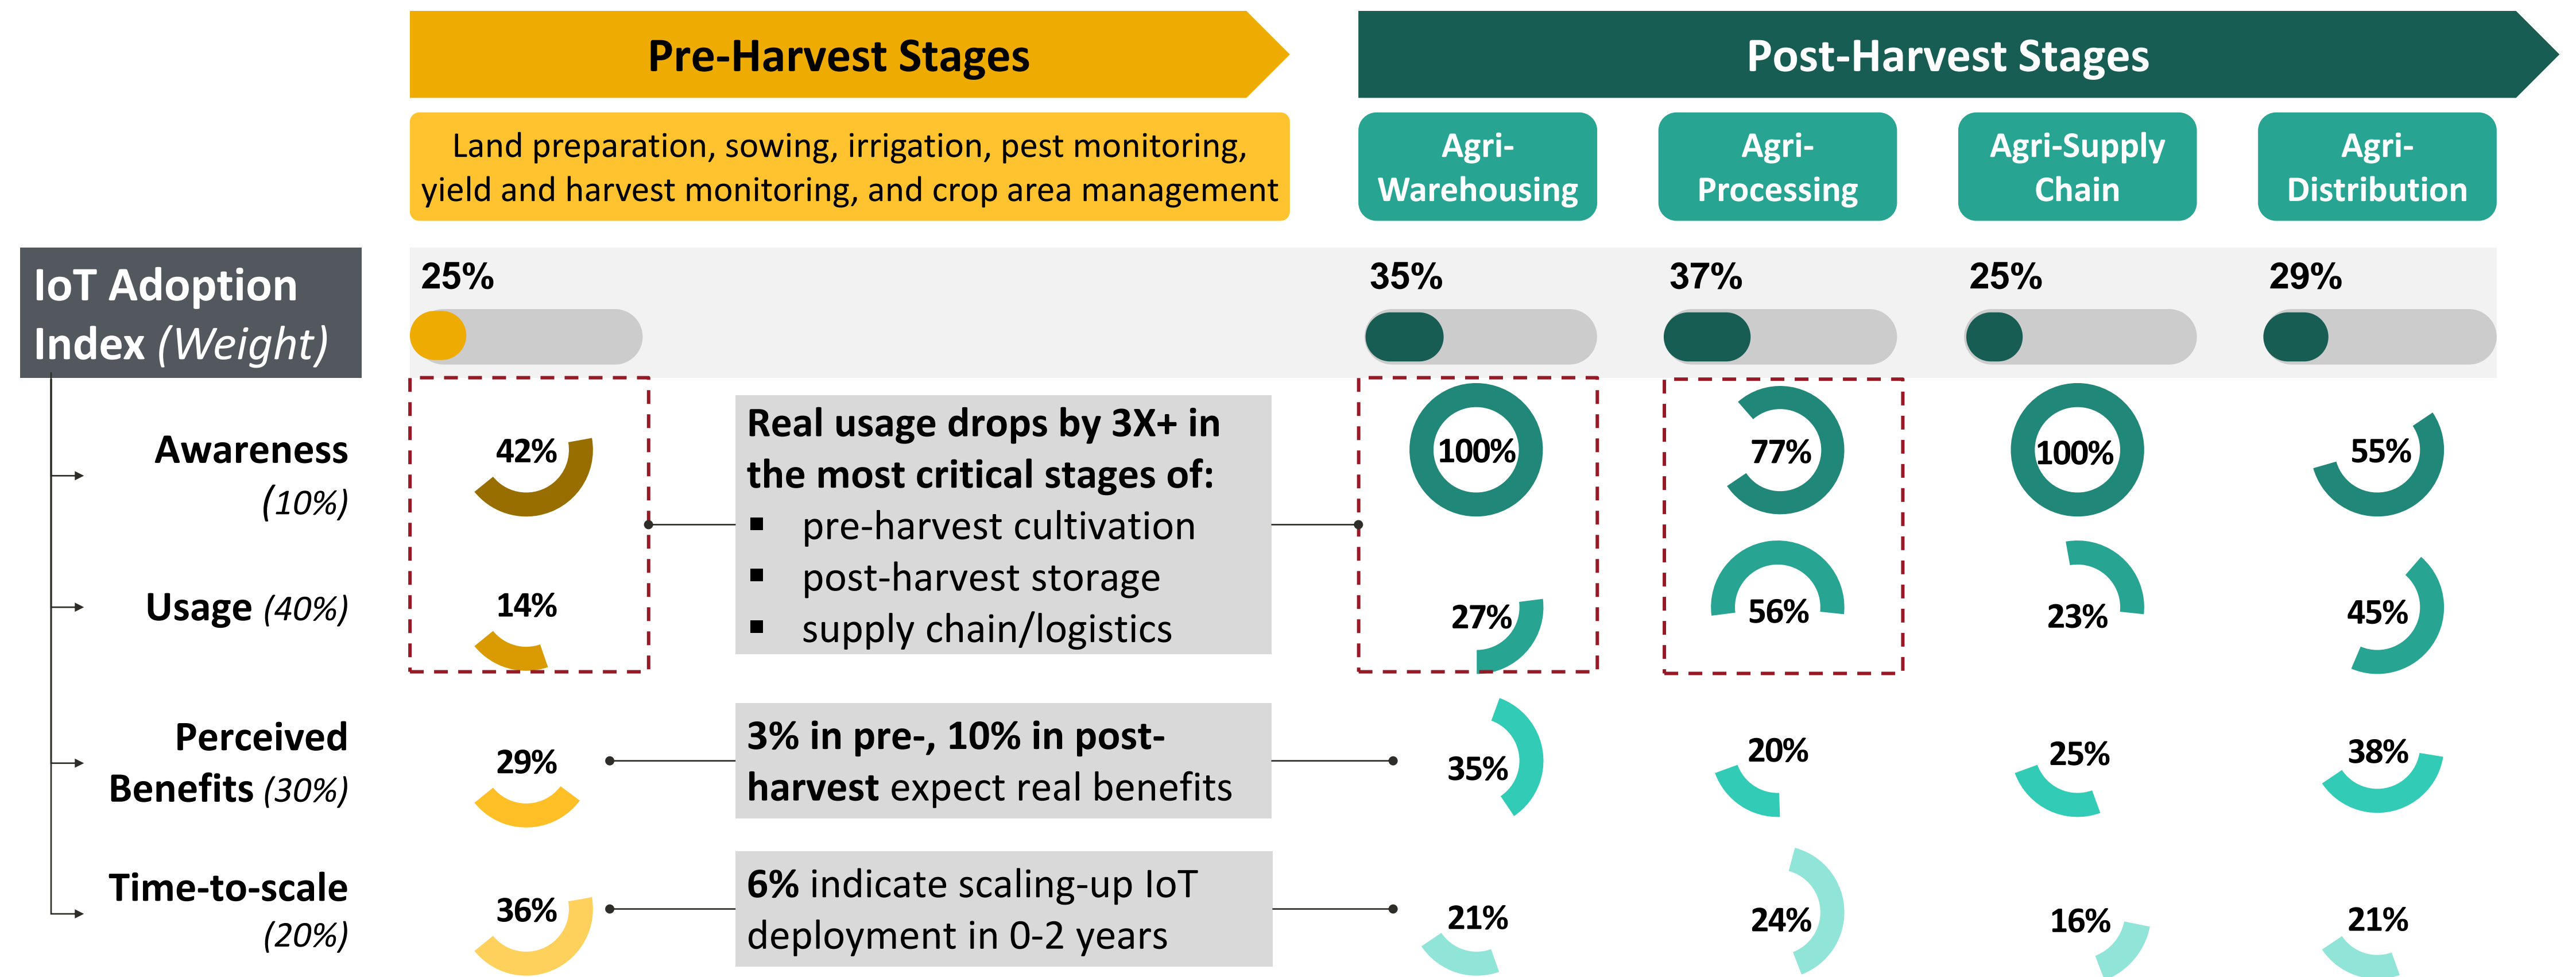

NASSCOM IoT Adoption Index is a composite of weighted scores across awareness, usage, benefits, and time to scaled deployment

This IoT Adoption Index is a first-of-its-kind assessment framework to track various IoT technologies, their deployment and usage maturity, and challenges to mainstream adoption across the agricultural value chain.

Between 27-37%, IoT adoption is significantly low across the Agri value chain, lowered by unclear benefits and longer time to scale

Lack of IoT advantages in pre-harvest stages stems from low farmer incomes and large-scale tenant farming; while in the post-harvest stages, with more organized companies and higher investment potential, unclear ROI is the stumbling block.

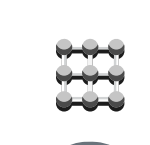

The IoT Adoption Index measures rate of awareness, usage, perceived benefits and time-to-scale on the basis of responses by all survey takers. Ideally, usage should be the base for benefits and time-to-scale. Respondents who are aware, but not using, have a notion of benefits and time-to-scale that can explain the adoption barriers. Further, the weighted sum of all four parameters may not always equal the adoption index, since the index further considered differentially scoring individual response options for each question. For instance, use of sensors was weighted lower than use of industrial robotics.

Awareness and use of IoT solutions in the pre-harvest stages is limited to basic sensors, RFID, and limited IoT devices

Since 40% farming production occurs through tenant farming done on <3 acre land holdings, need for awareness about technological solutions in the critical pre-harvest stages meets the high barriers of lack of intent, capability, capital, and credit.

Pre-Harvest IoT Adoption

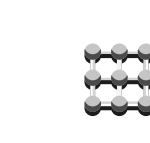

Aware and Using

	71%	Most Used Tech – Sensors/RFID, IoT devices
	29%	Least Used Tech – Industrial robotics used only in land preparation
	57%	Most Automated Stages - >40% adopters use 3 of 4 solutions in land preparation and irrigation
	57%	Least Automated Stages – Sowing, pest monitoring, and crop harvest
		Time-to-mainstream adoption – 5+ years

Aware, Not Using
Plan to Adopt

	57%	Tech Likely to be Used – 50% indicate Sensors/RFID
	14%	Tech Least Likely to be Used – Networking technologies (wired/wireless)
	57%	Stages of Likely Deployment – 50% indicate deployment in land preparation
	0%	Time-to-mainstream adoption – 5+ years

IoT Technologies Legend

	Sensors/ RFID
	Industrial Robotics
	IoT Devices* (DCS, monitors)
	Networking Technologies (Wired/Wireless)

Post-harvest Agri-warehousing and supply chain have low adoption, close-to-retail Agri-processing and distribution stages use more IoT

Encouraging growth in post-harvest IoT adoption is largely attributable to traceability using RFID and processing using robotic processing operations and packaging. Post-harvest warehousing and supply chains stages need automation to minimize losses.

Pre-harvest benefits – few human errors in data access and analysis; post-harvest – less time-to-market, waste control, and lower prices

Perceived or realized benefits suggest that IoT solutions need to be built and deployed at scale such that the impact is measurable in real-time and in the local context, and interdependent value-chain benefits reinforce greater adoption.

Pre-Harvest IoT Adoption Benefits

Real-Time Data Access	Direct benefit of low-cost sensor/RFID tech
Usable Field Data Capture	Field data captured and shared in a usable format
De-risked Human Error	Lower data collection errors, more use of robotics will lower process errors also
Improved Yield	Land and irrigation monitors improve yield, but soil quality must be addressed
AgriTech Startup Impact	75% of adopters plan to partner with AgriTech startups for focused solutions

Post-Harvest IoT Adoption Benefits

Operational Ease/Efficiency	Direct benefit of low-cost sensor/RFID tech and IoT monitors
Faster Time-to-Market	IoT devices monitor loss, waste, pilferage and diversions in distribution
Ease of Deployment	More effective monitors in smaller, tamper-proof packaging ease adoption
Solution Scalability	Standardized sensor and monitors enable cross-segment application
AgriTech Startup Impact	75-100% of adopters plan to partner with AgriTech startups for EoS

Adoption gaps and challenges emerge from lack of awareness, workforce resistance to change, and unproven RoI

Adopters are hesitant to scale-up rapidly as they have not clearly established the RoI on their initial investments, further creating internal resistance, constraining access to funds, and delaying R&D and innovations.

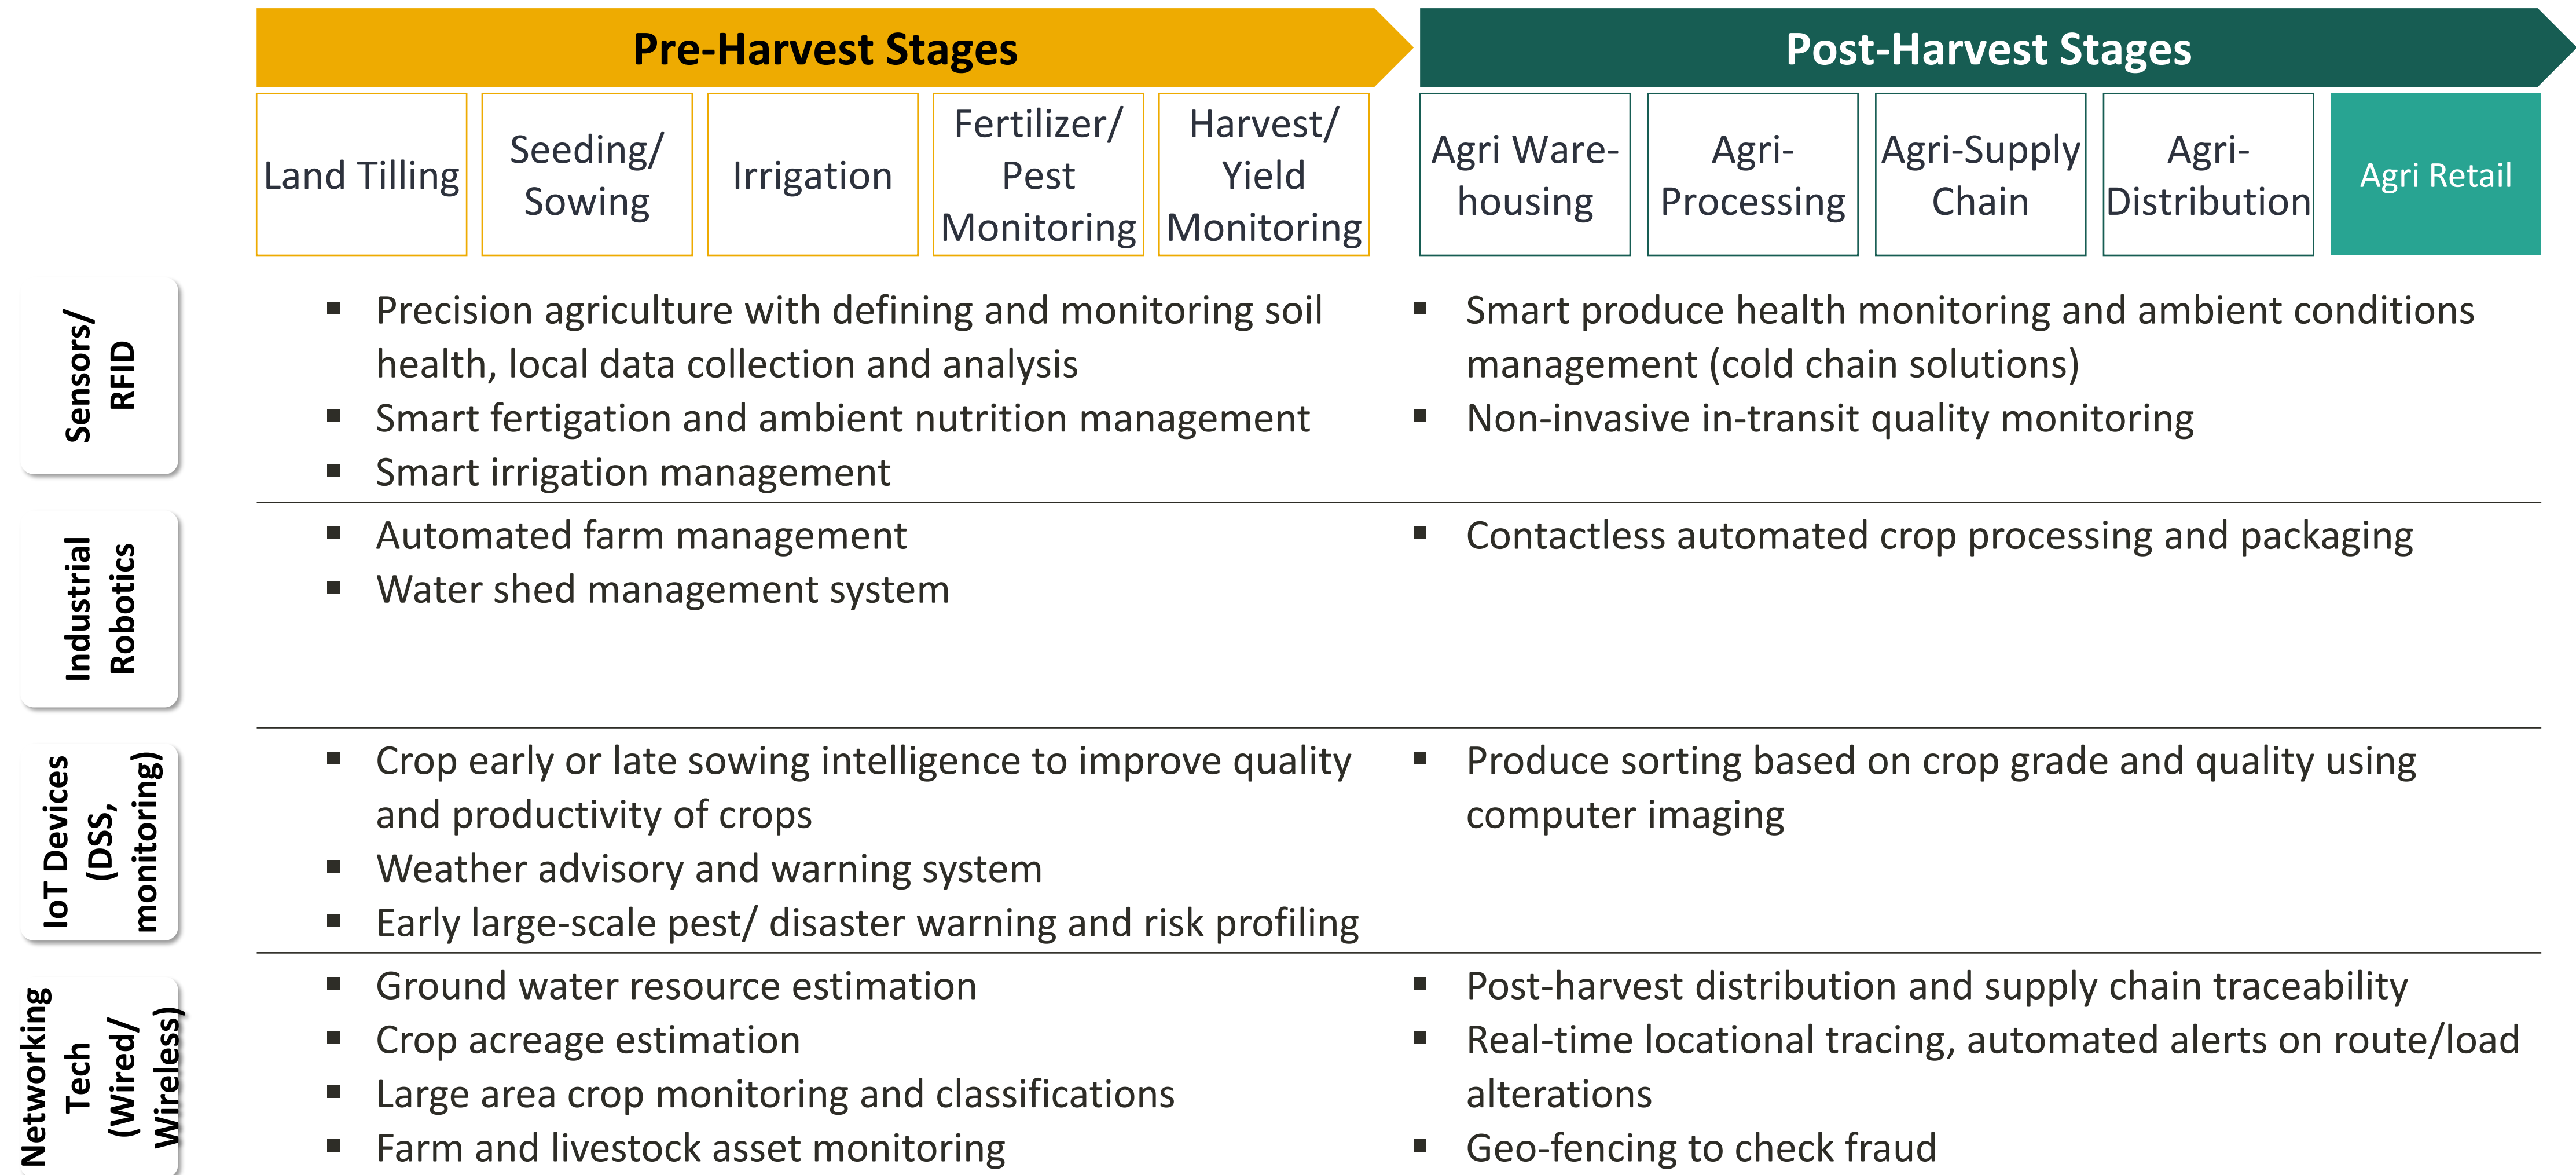

Pre-Harvest IoT Adoption Barriers

Unwillingness to Change	Majority pre-harvest non-adopters cite workforce resistance as a key barrier
IoT Tech Not User Friendly	Adopters rated IoT tech very low on ease of access and adoption, and cost
Affordability Concerns	Aside of the cost of solutions, impact on reducing cost of farming unproven
Deployment indecision	Non-adopters are undecided on whether to self-deploy or partner
Stretched timeframe	Most adopters suggest 5+ years to scale adoption, giving a sense of non-urgency

Post-Harvest IoT Adoption Barriers

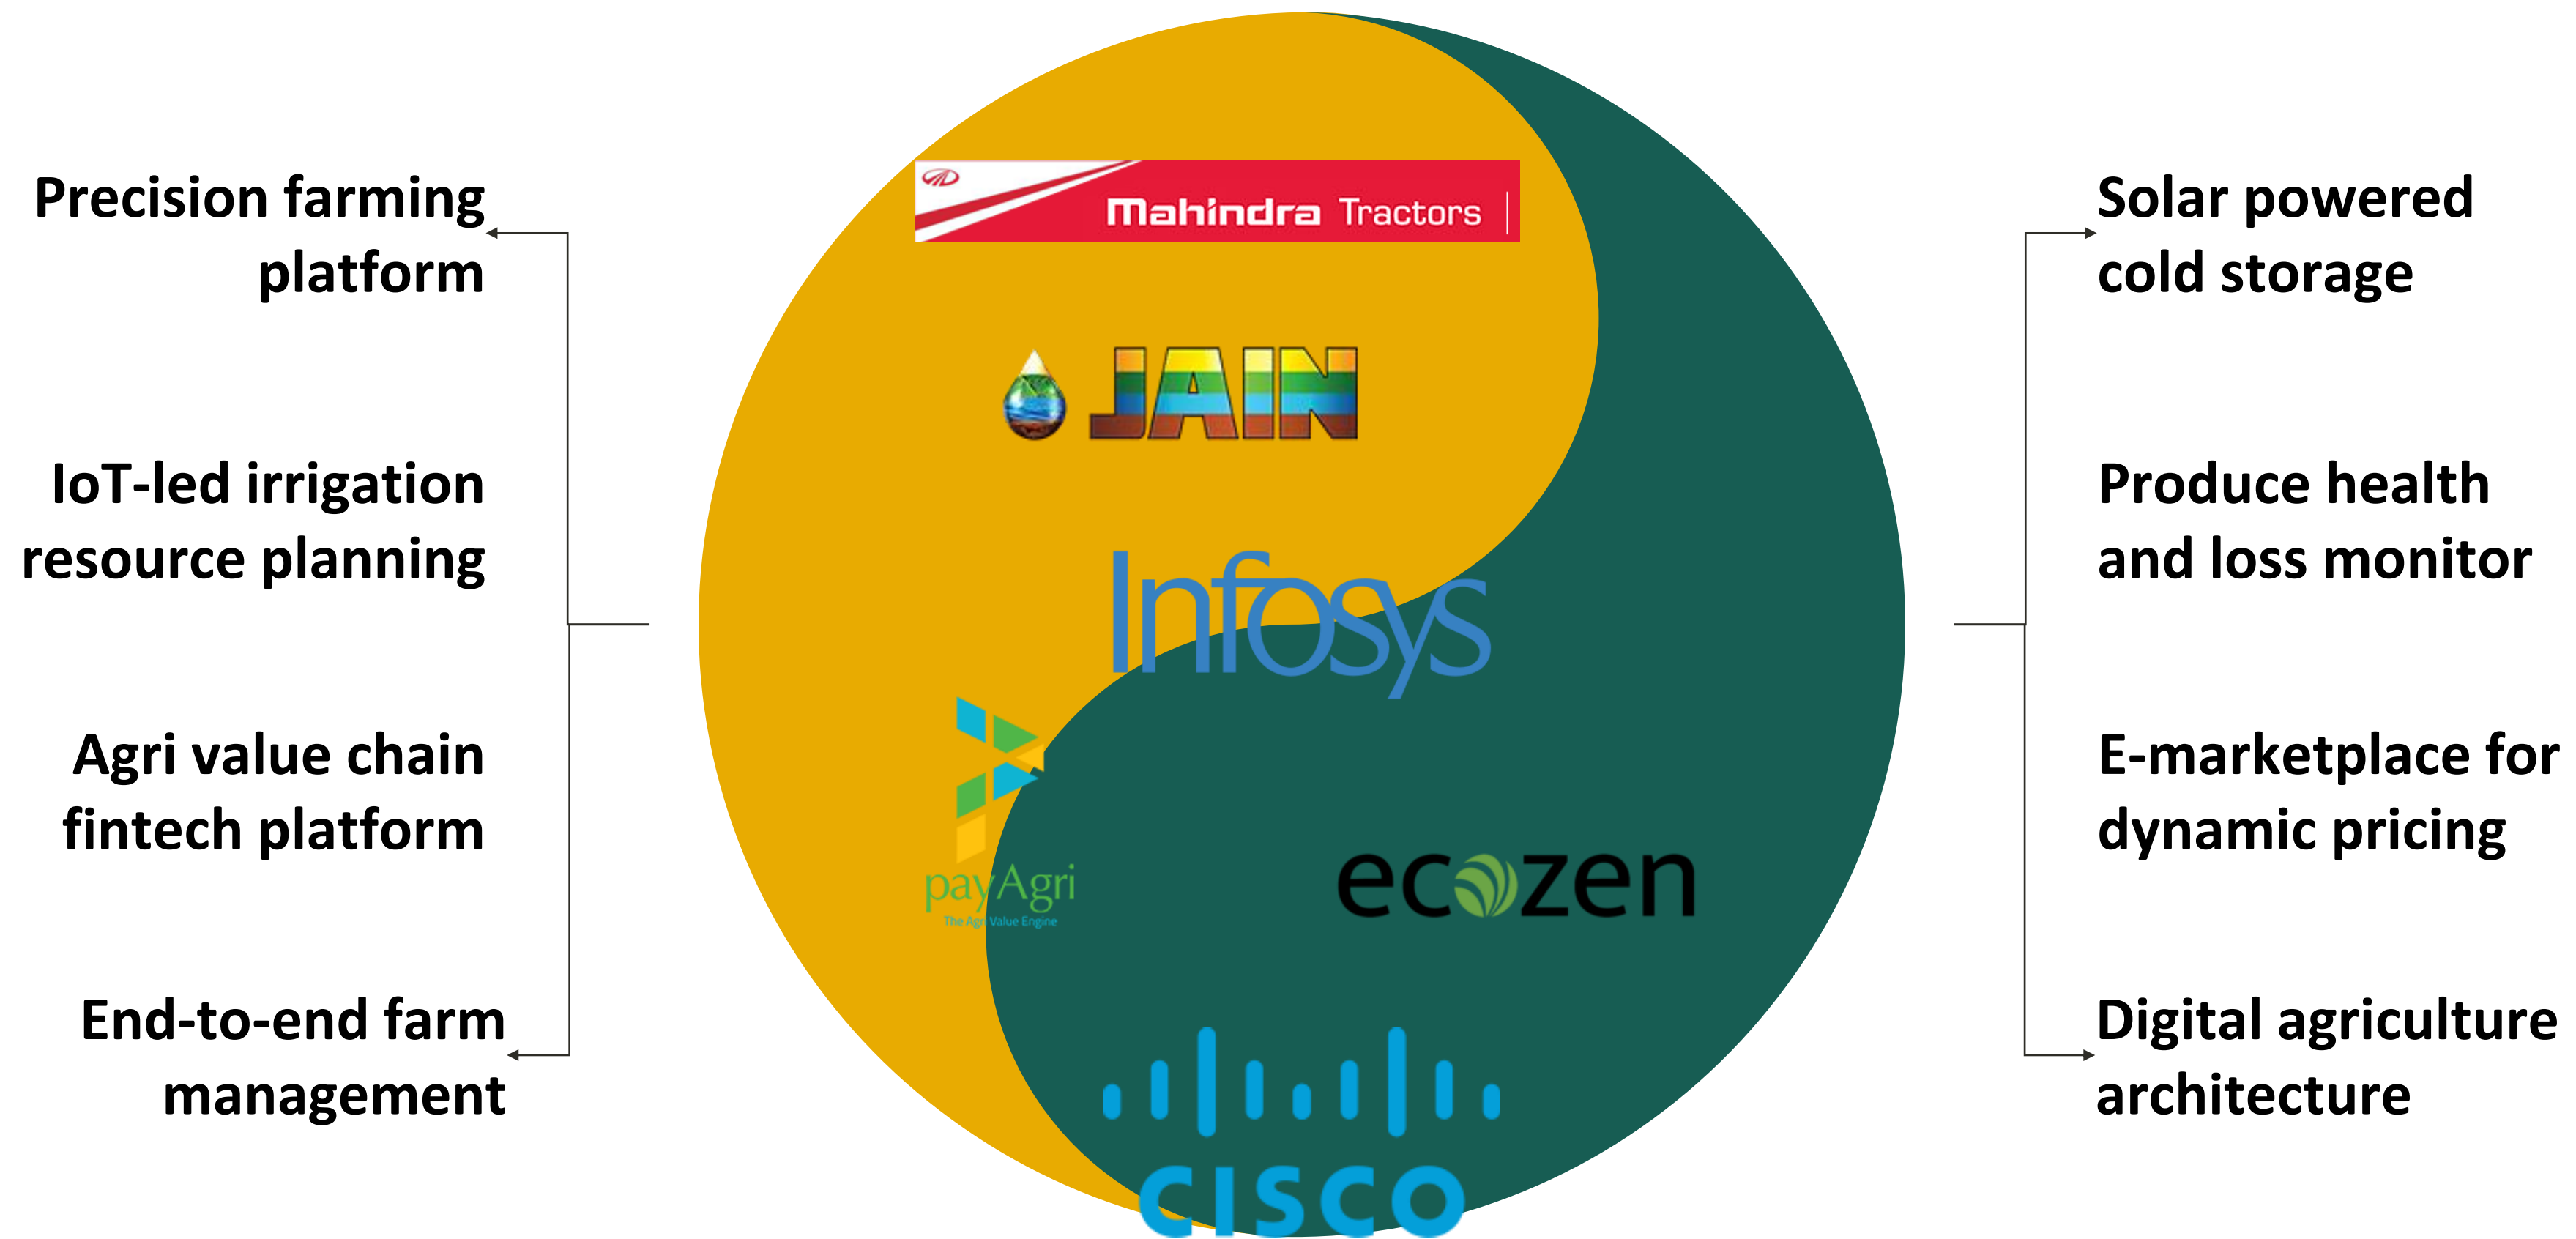

Privacy and security	Data privacy and security concerns of companies using IoT monitors
Limited IoT awareness	Knowledge of existence and applicability of IoT in agriculture
Trust in value of IoT lacking	Point solutions make it difficult to assess the impact on an overall process
Unwillingness to Change	Adopters cite workforce resistance as the key reason for not scaling up
Insufficient funds	>75-80% IoT solutions adopt basic, low-cost sensors with limited functionality

“Connected Agriculture” planning and architecture is needed to converge sporadic IoT solutions into integrated, intelligent platforms

Adoption roadblocks aside, more evolved IoT solutions, from single-stage applications to integrated platforms, are mainstream

Select IoT Solution Providers in the Agri Value Chain

Rana, a small-time farmer from Haryana, has delf-deployed IoT sensors and devices to optimize water productivity in his fields

Pre-Harvest Stages

Problem Statement

Erratic and uneven rainfall across India increases the challenges for small and marginal farmers with limited ground water access to manage water efficiently, while also managing the mix of crops based on water constraints.

A farmer, named Rana, in the Nandana village near Karnal district in Haryana devised an IoT-enabled solution to this problem.

Solutions and Impact

Solution

- Installed telemetry devices along with panels mounted onto poles on the road adjoining his fields
- Buried all the sensors / IoT enabled devices under the ground which helped him to check the moisture level in the soil
- Both devices and sensors are low cost from domestic providers which helped him adopt for a small 5 acre land

Impact

- 30% water use reduction, thereby lowering the dependence on rainfall or ground water
- 8% to 12% reduction in COC (input cost) and harvesting costs, net of technology investment
- Rana's 5-acre land is able to generate higher yield and income, thus creating an easy-to-replicate model farm example for the district

Cisco's Connected Agriculture IoT deployment for livestock tracking and water management

Pre-Harvest Stages

Problem Statement

Llanelli faced two main challenges in the daily management of their business; livestock tracking and water management.

Every single animal needed to be counted and managed manually once a month; a lengthy and tedious process prone to human error. Additionally, with eleven dams and three water tanks spread across a 1,300 mountainous land, Llanelli's staff lost a sizable amount of time travelling to each dam and tank to verify water levels and action the appropriate measures. And, they had to perform that task daily, and multiple times a day during draughts.

Llanelli is a 1,300 acres family farm located in Bathurst, NSW.

Solutions and Impact

Through a solution combining Cisco IoT and Enterprise Networking products, third party sensors, and Farmdeck, an in-house analytics platform, Outcomex enabled Llanelli to track and identify livestock, manage water tanks and dams' levels, and surveillance the perimeter of the property.

Solution: The solution consists of:

- Cisco Solution for LoRaWAN, Cisco Camera
- Semtech Sensors, Custom High Frequency RFID sheep tags, Outcomex online platform

Impact: By providing access to data and analytics for water (levels, leaks, volumes and usage) and livestock (track, count and identification), Outcomex has enabled the Bathurst farm to more proactively address their many challenges, such as drought preparation, tank damage, stray livestock, and budget constraints.

Ecozen's solar-powered portable cold rooms improve self-life and minimize the biggest challenge of 40% post-harvest produce loss

Post-Harvest Stages

Agri Warehousing

Agri-Processing

Agri-Supply Chain

Agri-Distribution

Agri Retail

Problem Statement

Ecozen Solutions is an Agri-Tech company manufacturing cold storages rooms & solar water pump controllers in India. Approximately 25,000 farmers in India use Ecozen's products.

Employees: 70+

Industry: Agri-Tech

Corporate Office: Pune

Website: www.ecozensolutions.com

Solutions and Impact

Ecozen Solutions offers Ecofrost, a solar-powered, portable cold room based on thermal energy storage for on-farm cooling and storage of perishable produce immediately after harvest.

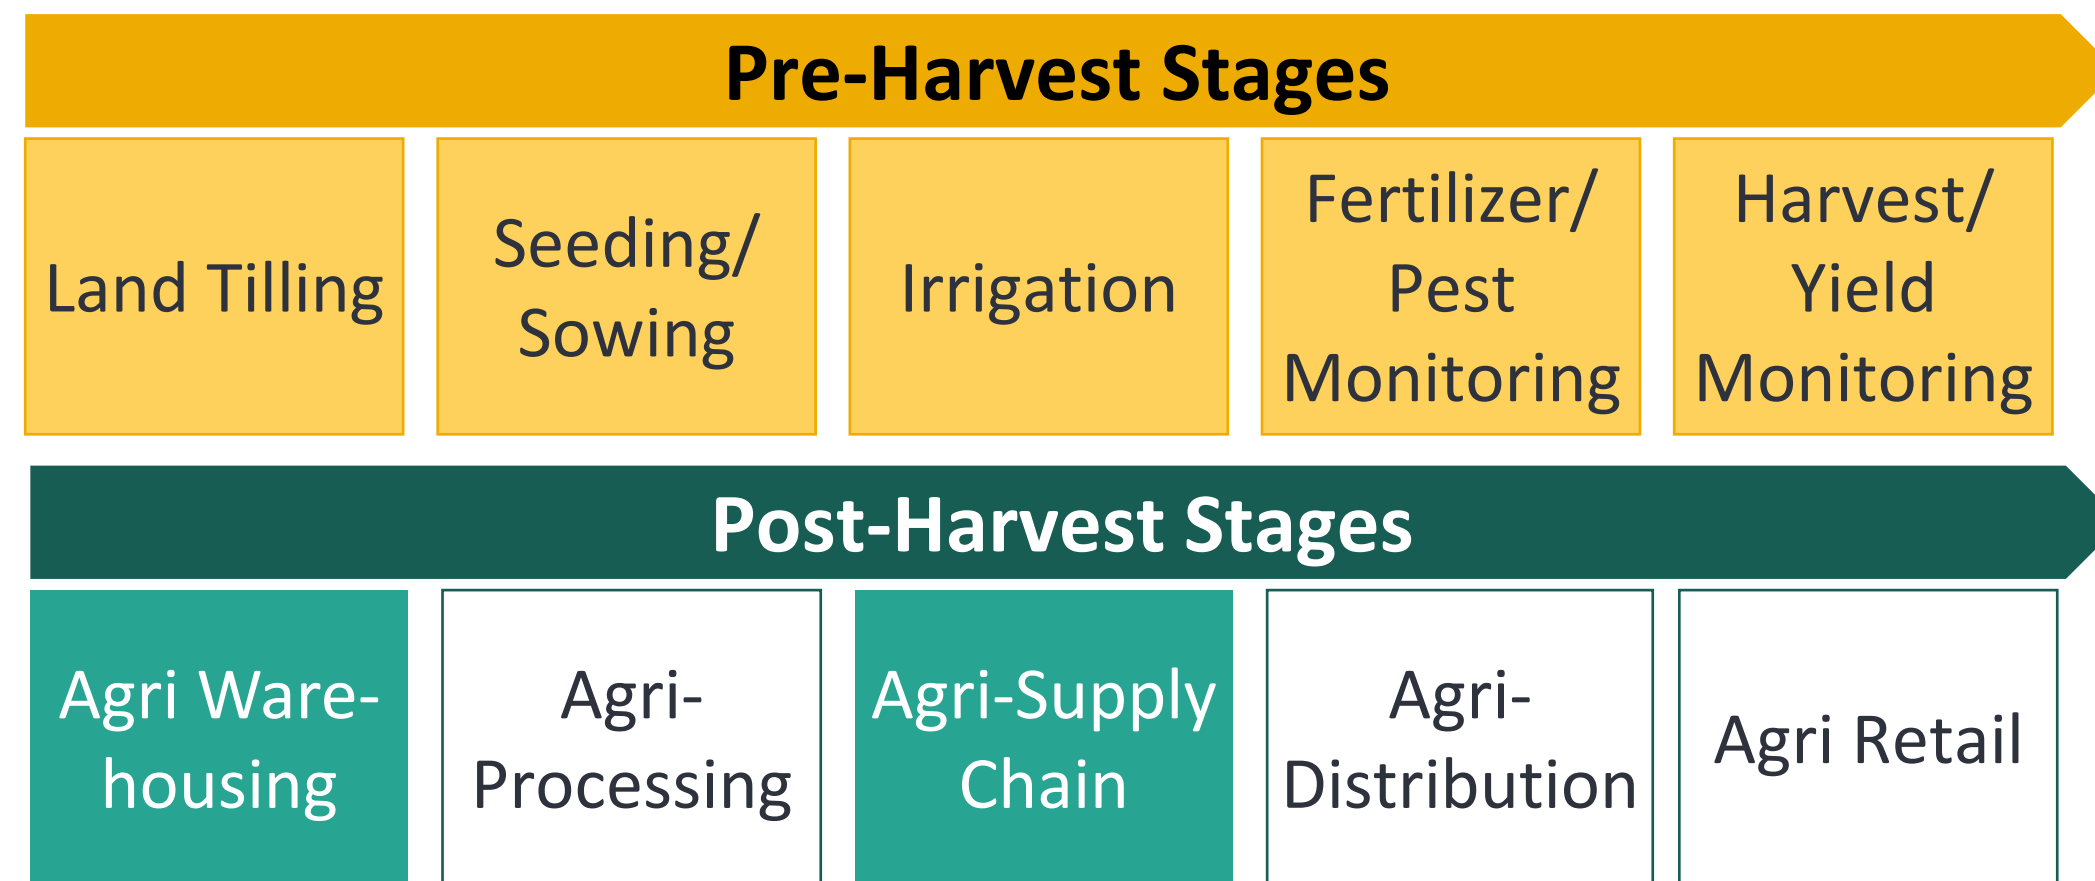

Solution

- Ecofrost uses in-built IoT sensors to control temperatures
- Mobile unit for remote rural areas and small farms
- Farmer-controlled mobile App for remote control
- Automatic battery mode switchover during cloudy conditions or lower solar panel output
- Innovative 'Lease-a-Cold-Room' model for cyclical or unplanned needs or to manage high-perishability conditions

Impact

- Shelf life of highly perishable crops, such as Spinach, Capsicum, Tomatoes went up from 24-72 hours to 21 days
- Profit margins on exotic vegetables, such as Broccoli, went by 20-30% with a 2-day shelf-life improvement
- Remote farmers able to access Tier-I/Tier-II cities located ~1000 kms away with better produce shelf-life, resulting in more sales

Infosys's IoT and AI/ML based agri-information platform enables farmers to make “environment- and market-linked” crop selections

Company Overview

Infosys Infosys has developed a platform leveraging IoT, Big Data & Analytics, Mobility and Cloud, combined with customizable algorithms, business logic, and strong agriculture domain expertise through collaboration with agricultural universities and research institutes.

Employees: 2.2 Lakh+
Industry: IT services
Corporate Office: Bengaluru
Website: www.infosys.com

Solutions and Impact

Infosys has deployed IoT-enabled devices for crop production at one of its campuses in Hyderabad.

Solution: The IoT-enabled farming platform has been built as an end-to-end solution that integrates domain expertise, market intelligence, and big data analytics to draw relevant and actionable insights for a farmer/cultivator or a crop advisor.

The platform has been used over seven crop seasons. The platform intakes data from a wide variety of field sensors and devices, such as field wireless sensors, drone and satellite images, actuators, wireless communication gateways, third party services such as weather data and market price exchanges or sources, and applies a host of open source built multiple simulation models using AI/ML techniques such as CNN. The platform is hosted on cloud and can be accessed through multiple channels, such as the Web, a mobile device, etc.

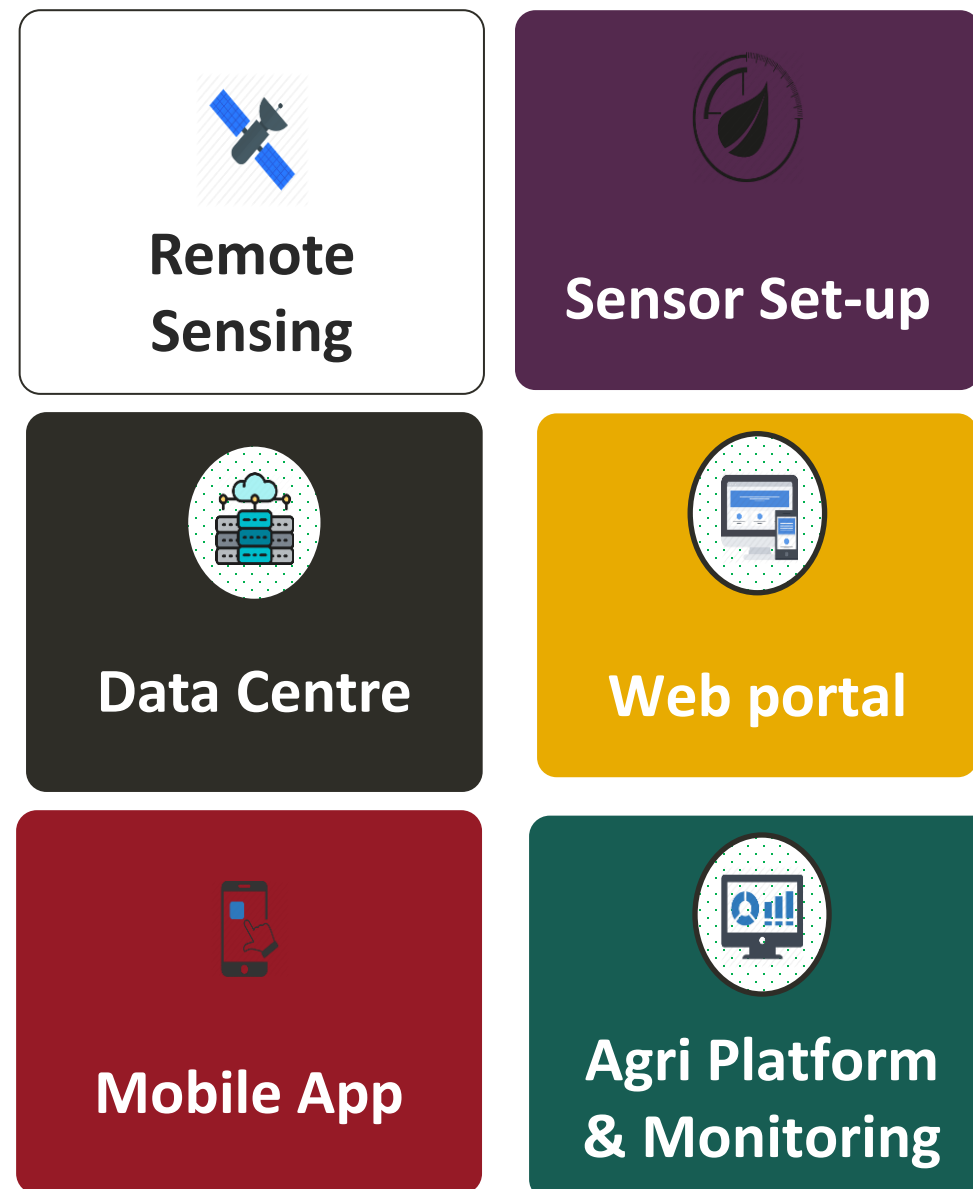

Impact: Infosys has observed significant improvement in overall cultivation cost reduction and increase in water productivity.

Cisco aims to digitally strengthen the farming system in Kerala using digital technologies and IoT-enabled integrated farm management

1. Sensors in field

II. Data collection, Analytics, collaboration with experts

III. Setting up of a Village Knowledge Centre with customized dashboards for farmers, VKCs and govts.

Objectives

- Leveraged power of Technology and Data in Agriculture
- Implemented precision agriculture solutions and remote sensing for real time status for monitoring, control.
- Deployed Agri Platform with Agri Digital Infrastructure and Mobile App for insights & outcomes.
- Built Village Knowledge Centres (VKCs) for enablement & skill development of farmers.

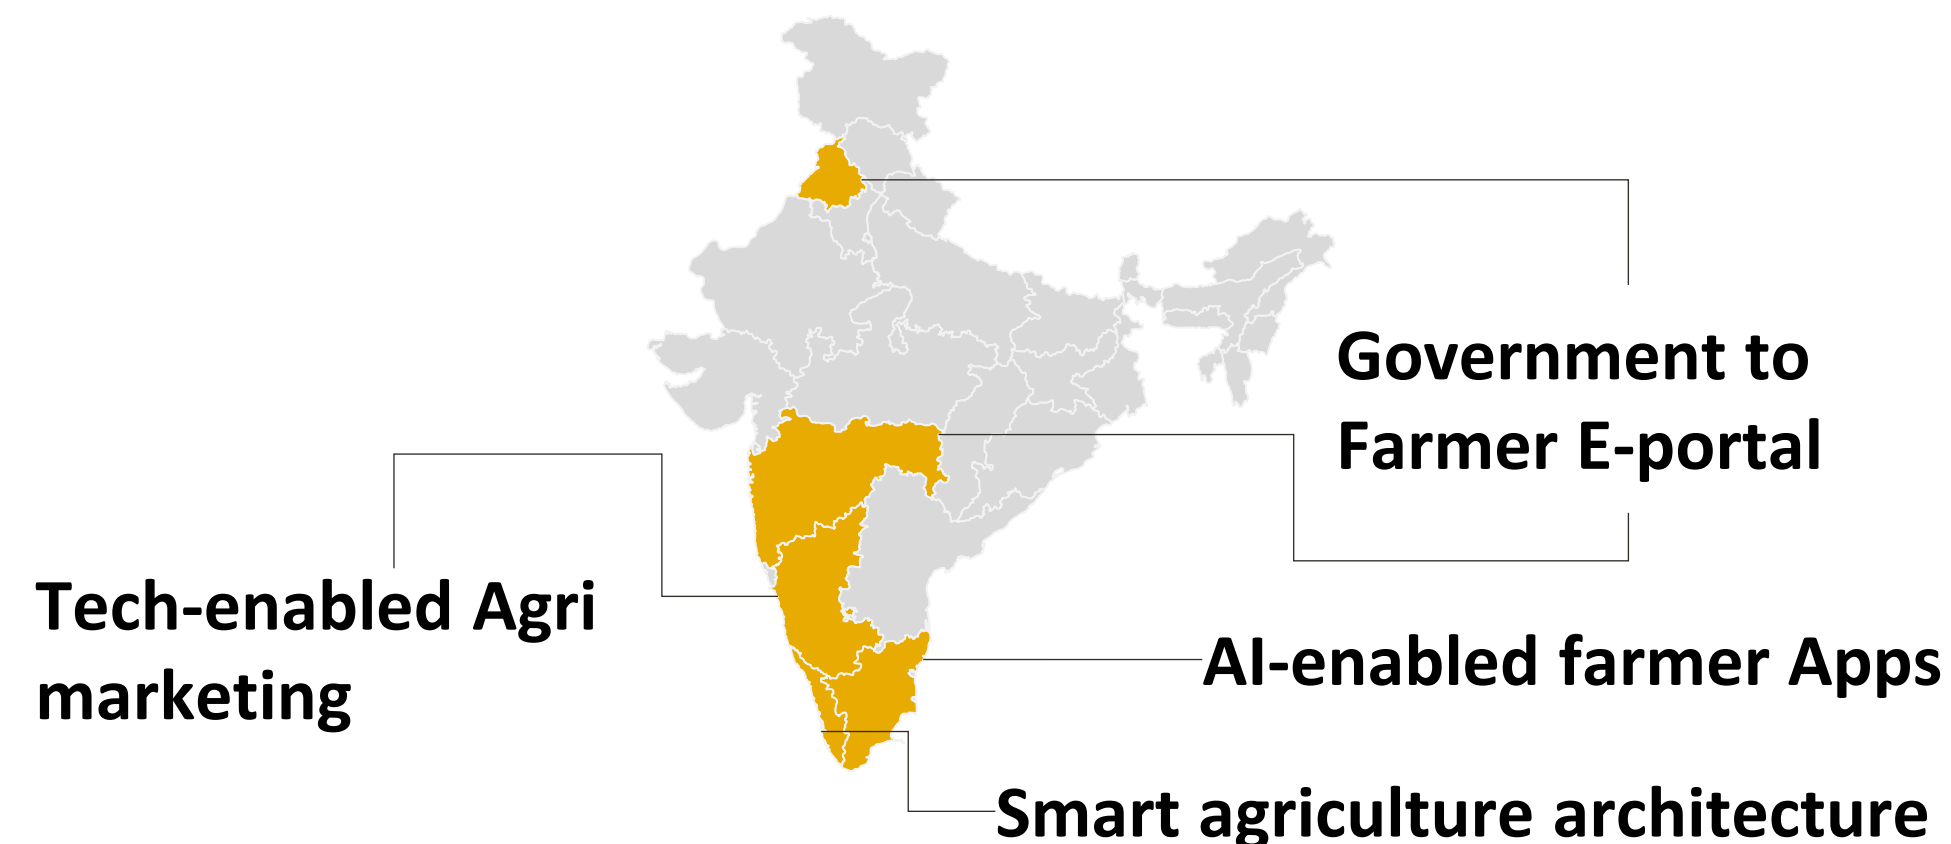

Outcomes

- Real-time information on farm water level, temperature, pH, etc. to plan and execute the farming activities.
- Alerts and predictions on weather hazards, pest infestations for better planning and preventive measures.
- Region wise crop health, harvest progression and readiness data for better department planning at district/ state level.
- Collaboration between Farmers- FPO's-Krishi Panchayat- Agri Dept.- Industry

State governments are building support portfolios, enterprises are dedicating CSR funds, and AgriTech startups are innovating rapidly

Emerging Ecosystem Support, Programs, and Innovations to Drive Tech Adoption in Agriculture

State Governments With Active AgriTech Initiatives

Rapidly Growing AgriTech Startups

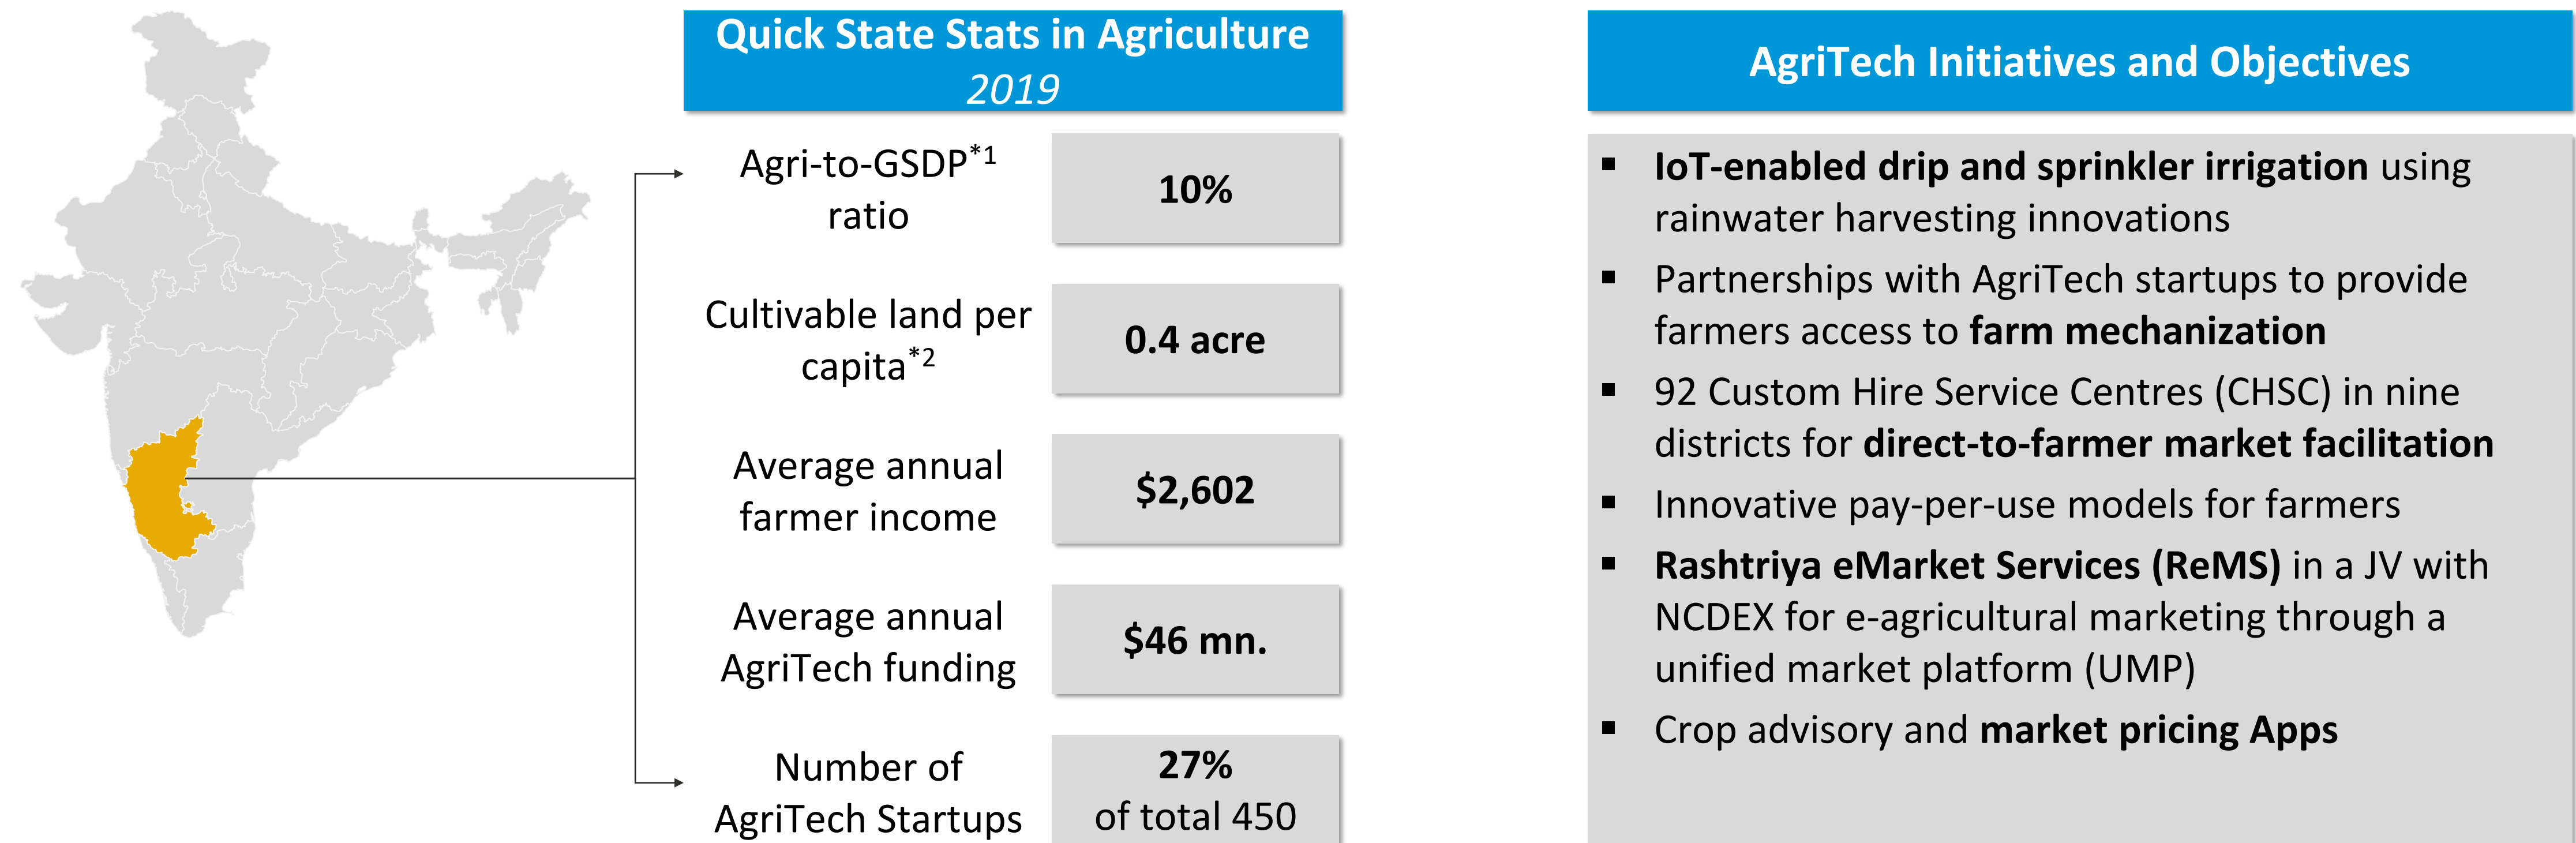

1. **80-90% of AgriTech startups focused on pre-harvest digitization** using low-cost sensors and devices
2. **Post-harvest - higher adoption in close-to-retail stages** with focus on more advanced communication tech

Enterprise CSR Funding into AgriTech Programs

CSR Allocation	<ul style="list-style-type: none"> ▪ \$17.8 Million or 0.3% of \$10 bn. “utilized” CSR funds by 7,300+ Indian enterprises during 2014-2019
Funds Distribution	<ul style="list-style-type: none"> ▪ ~95% or \$17 mn. in pre-harvest stages <ul style="list-style-type: none"> ▪ Irrigation techniques ▪ Crop efficiency and pest monitoring ▪ <5% is directed to post-harvest stages
Mode of Engagement	<ul style="list-style-type: none"> ▪ Direct-to-farmer (D2C or B2C) models via not-for-profit (NGOs) or self-help groups (SHGs) at the village level
Key Support Areas	<ul style="list-style-type: none"> ▪ Infrastructure support in drip irrigation, solar energy powered farm equipment ▪ Digital Tech support through real-time alert Apps, farm management portals, and e-agri marketing platforms

Karnataka has adopted one of the most effective technology interventions in agriculture marketing of farming equipment

Karnataka has adopted a market-driven approach to bringing innovations in farming, equipping farmers with the right balance of equipment, information, and market access to enable higher profits from shrinking agri output and cultivable land

*1 – GSDP is Gross State Domestic Product

*2 – Cultivable land per capita is calculated as the ratio of Net Sown Area/Total Population; numbers may vary since data has been sourced from 2015-2019

Sources: Government of Karnataka, YourStory

In AgriTech startups, 80% surveyed offer pre-harvest solutions, but full-spectrum solutions need stronger farm-side interest and usage

AgriTech Startups in the Pre-Harvest Stages, 80% of the total respondents

II. IoT technologies adopted

III. % Startups securing >50% interest & usage

IV. Key Observations

- 1. Usage is limited to simpler IoT Tech
- 2. Interest from end users, i.e. farmers, is unpredictable and dependent of investible surplus

For post-harvest AgriTech startups, low-cost, scalable, and replicable IoT solutions are key to commercial success

AgriTech Startups in the Post-Harvest Stages, 20% of the total respondents

I. IoT technologies adopted

50% use simpler IoT tech – sensors, RFID, and flow/application control

50% offer yield and condition monitoring solutions to help farmers manage real-time field conditions

50% offer GPS/ GNSS solutions to track crops to warehouses, processing units, and retail ends

3% providers find networking tech solutions profitable after heavy upfront capex

2% providers offer DeepTech solutions with IoT / AI sub technologies

II. Segments served

III. % Startups securing >50% interest & usage

25% end-users expressed interest and used IoT solutions in the processing, distribution and retailing segments

AgriTech contribution by enterprises, at 0.3% of CSR budgets, lags as enterprises assess right partnerships, models and tech solutions

Pre-Harvest Stages

\$17 mn. or 95% of CSR Funding in AgriTech has been in pre-harvest

476 rainwater channels, 60,000 horticultural crop areas covered with drip irrigation, 681 small rain-water harvesting and 14 ponds to improve soil quality implemented in Rajasthan

36,000 farmers across 11,000 villages impacted by implementation of solar Irrigation pump sets and integrated farming models

CCI CSR initiatives impacted 4,500 apple growing farmers who were able to increase their income

Pro-bono installation of solar water pump sets impacting 100+ farmers

Reliance Foundation Information Services (RFIS) provides information, such as, tackling pest attacks on crops, cyclone alerts for fishermen, or preventive measures against livestock diseases, thereby having impacted 2 mn. farmers

mKrishi, mobile agri advisory system giving information in local languages on agriculture related advice, has been used by more than 1 mn. farmers across 10 states. Aim is to reach 100 mn. farmers

50,000 farmers have benefited from “Krishi Mitra” & “Seed the Rise” CSR initiatives

Post-Harvest Stages

5% of CSR funding in AgriTech

- Total Farmland size of more than **4.15 lakh** acres impacted
- E-Choupal Agri business platform & advice has been beneficial to lakhs of farmers
- Deployed across Uttar Pradesh, Bihar, West Bengal, Rajasthan, Madhya Pradesh, Andhra Pradesh & many more states

Irrigation

Crop Efficiency

Recommendations for technology infusion in Indian Agri to enable a systemic shift to self-sustainable value creations

Access to Cutting-Edge R&D, Cluster Development, Education

- Institutionalize R&D and innovation in agriculture by enabling access to top Tech capabilities within the country – co-location within STPIs or startup hubs, open platform Agri datasets
- Build Agri corridors on the lines of industrial corridors with PPP-mode development and farmers' equity
- Formalize Agri education via multiple routes – vocational training at primary farming schools, more Agri degrees, and Agri MBAs

Connected Agriculture Foundation

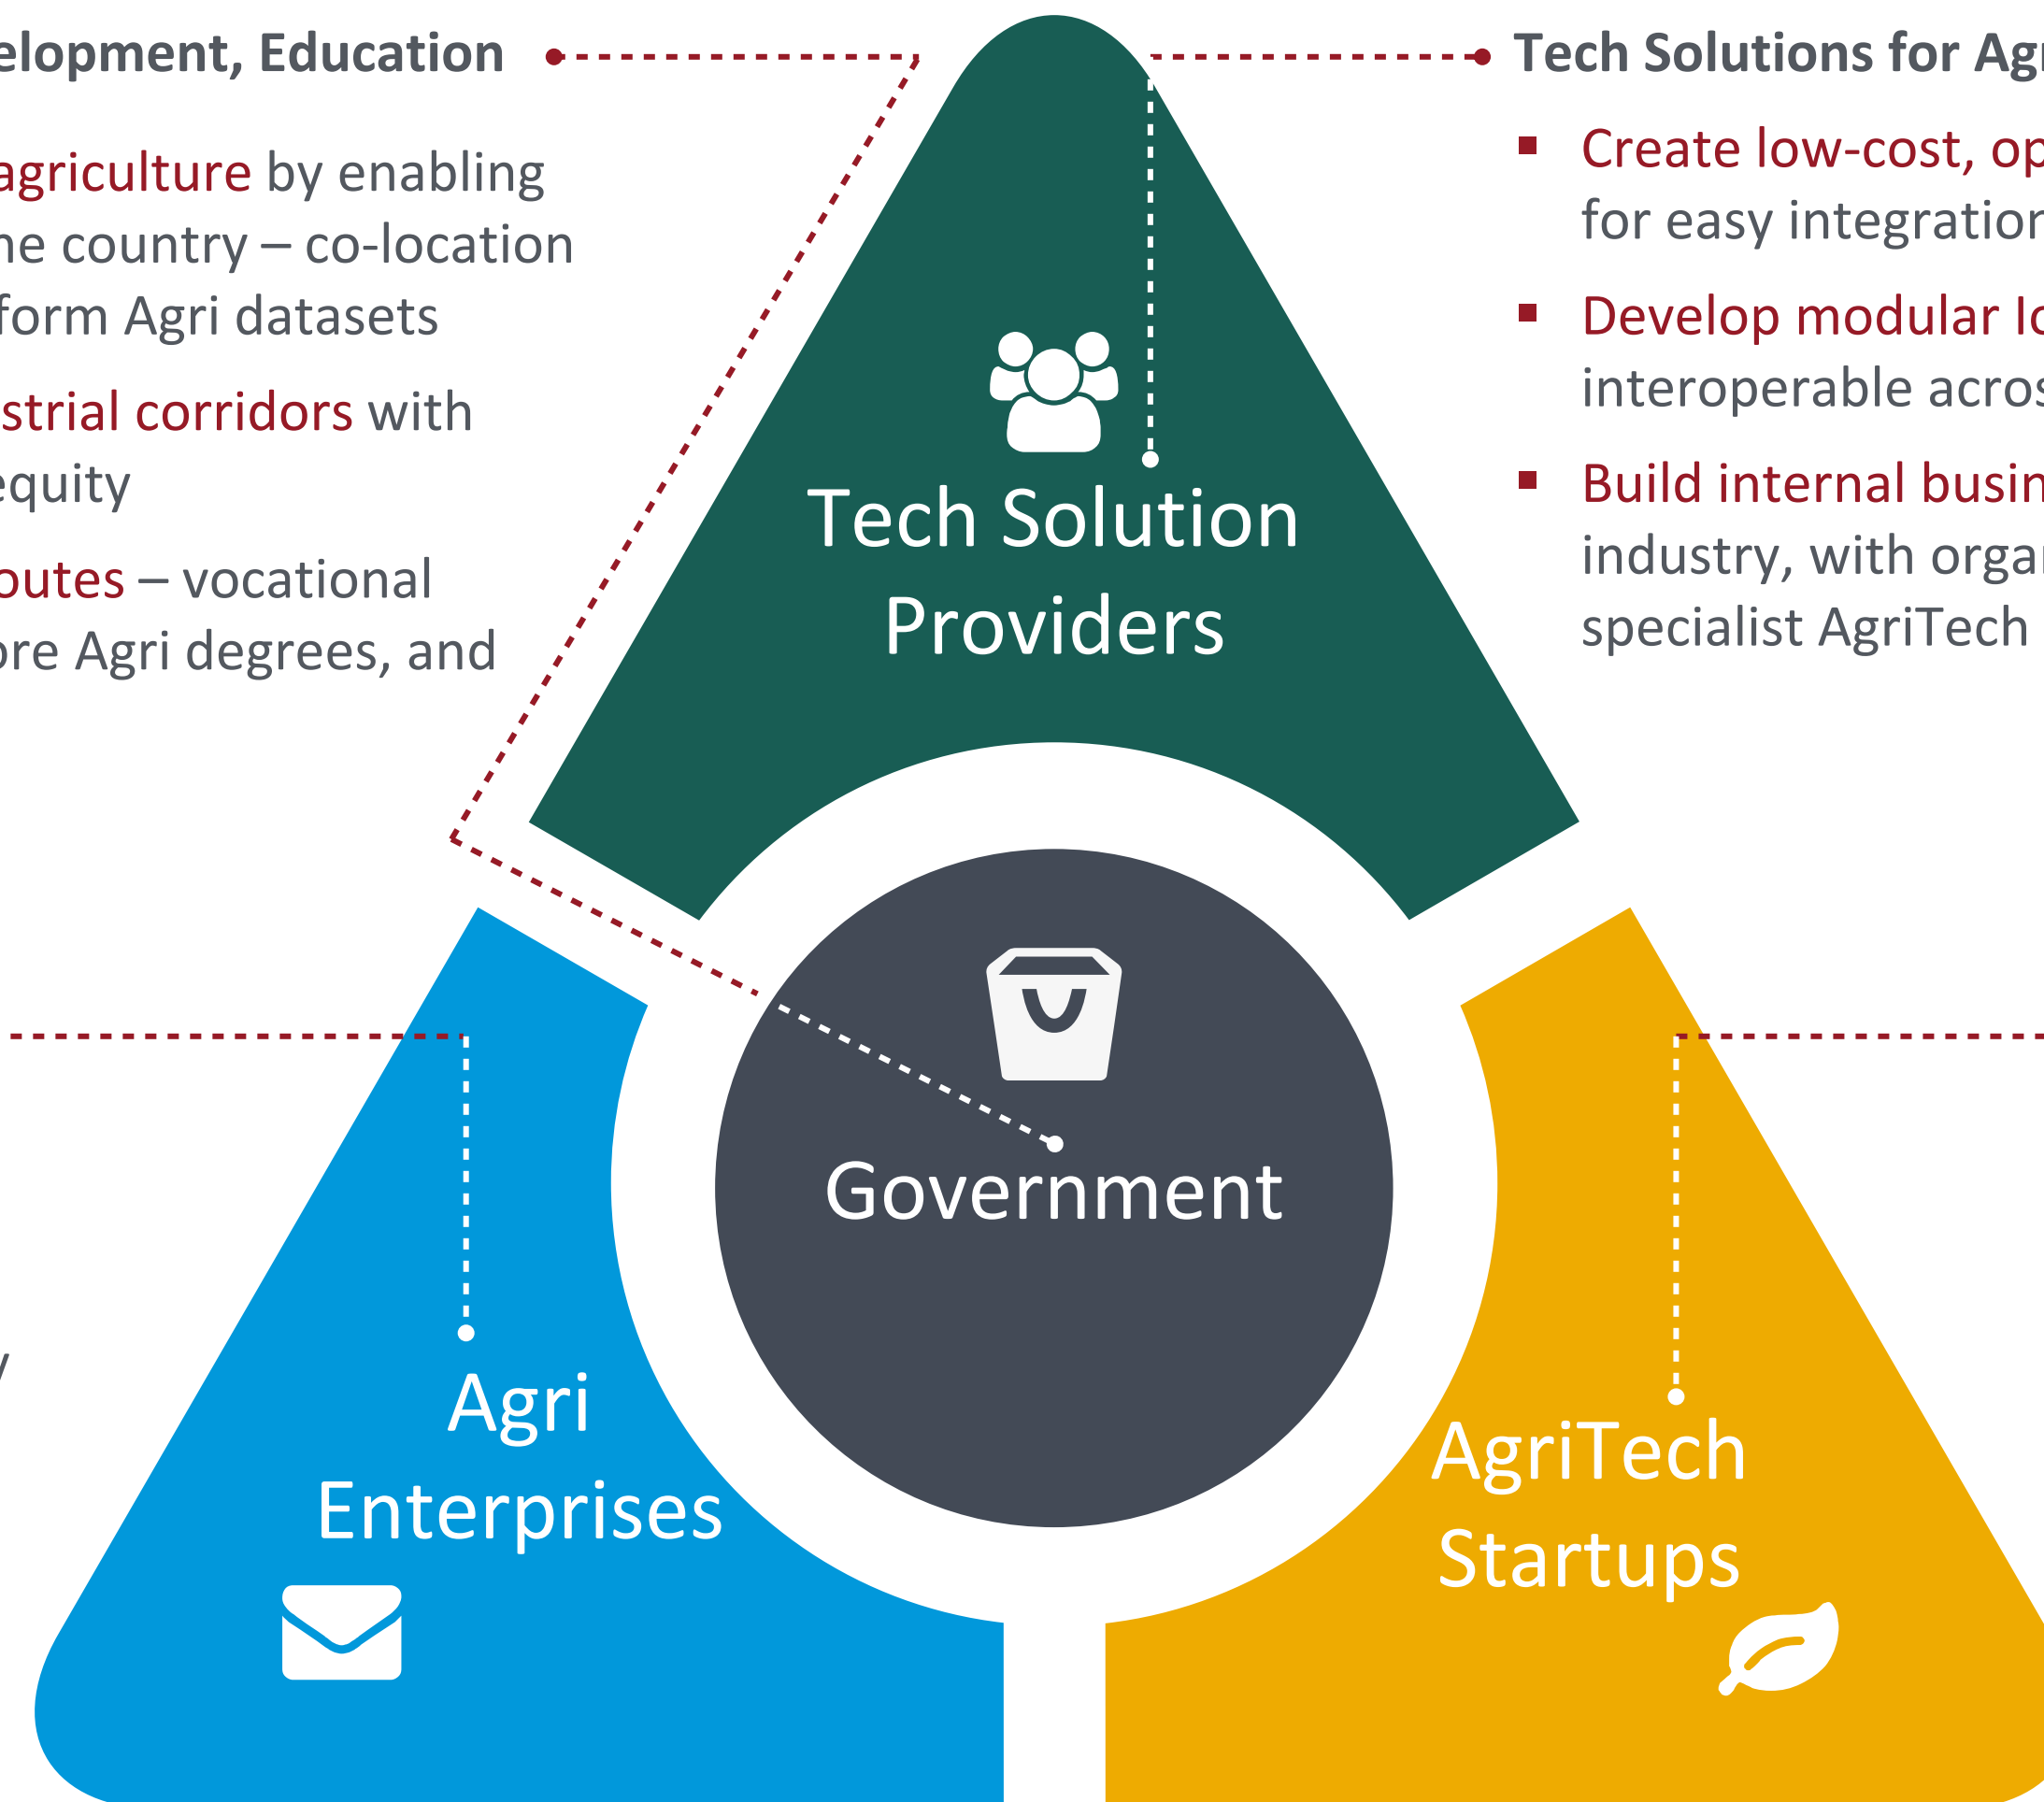

- Establish global standards in Agri containerization, storage, distribution
- Invest in low-cost high-speed wireless infrastructure and satellite connectivity for real-time data use
- Mobilize CSR and digital tech funds to adopt, and innovate with, AgriTech startups

Tech Solutions for Agriculture as an Industry

- Create low-cost, open source, cloud-based platform solutions for easy integration, access, and device support
- Develop modular IoT-integrating applications that are interoperable across various farmer information portals
- Build internal business case and CoEs to serve Agriculture as an industry, with organic/inorganic approach to incubating specialist AgriTech ventures

Pivot and Collaborate

- Establish local presence along Agri clusters for ecosystem integration and access to government, industry, local NGOs, and FPOs
- Pivot to either a verticalized solution for the broader market, or an end-to-end horizontal solution for a cluster of farms

About Cisco

Cisco (NASDAQ: CSCO) is the worldwide technology leader that has been making the Internet work since 1984. Our people, products, and partners help society securely connect and seize tomorrow's digital opportunity today. Discover more at newsroom.cisco.com and follow us on Twitter at [@Cisco](https://twitter.com/Cisco). RSS Feed for Cisco: <http://newsroom.cisco.com/rss-feeds>

About NASSCOM

The National Association of Software and Services Companies (NASSCOM®) is the premier trade body and chamber of commerce of the Tech industry in India and comprises over 2800-member companies including both Indian and multinational organizations that have a presence in India. Our membership spans across the entire spectrum of the industry from start-ups to multinationals and from products to services, Global Service Centers to Engineering firms. Guided by India's vision to become a leading digital economy globally, NASSCOM focuses on accelerating the pace of transformation of the industry to emerge as the preferred enablers for global digital transformation. Our strategic imperatives are to reskill and upskill India's IT workforce to ensure that talent is future-ready in terms of new-age skills, strengthen the innovation quotient across industry verticals, create new market opportunities - both international and domestic, drive policy advocacy to advance innovation and ease of doing business, and build the Industry narrative with focus on Talent, Trust and Innovation. And, in everything we do, we will continue to champion the need for diversity and equal opportunity. NASSCOM has played a key role in not just the growth of the Industry to become a \$180+ Billion industry today, but we have helped establish the Tech industry in India as one of the most trusted partners, globally. NASSCOM continues to make significant efforts in contributing towards India's GDP, exports, employment, infrastructure development and global visibility. Our membership base constitutes over 95% of the industry revenues in India and employs over 4 M professionals, and as technology blends into every aspect of the economy, we expect the industry to become key driver of growth, development and inclusion for the country. Our mission is to make India a global hub for Innovation and Talent so when the world thinks Digital, the world will think India.
